QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

LCS/LCSD

(Sample number(s): 7265225-7265227, 7265234, 7265236-7265237, 7265241-7265242, 7265244-7265246: Analysis: 06918)
The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Since the recovery is high and the target analyte(s) was not detected in the sample, the data is reported.

(Sample number(s): 7265223-7265224, 7265228, 7265230-7265232, 7265235, 7265238, 7265240, 7265243, 7265247-7265248: Analysis: 06916)
The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
4-Amino-2,6-dinitrotoluene

(Sample number(s): 7265229, 7265239: Analysis: 06918)
A thorough investigation for HMX was performed on the ampulated standard used for the laboratory control samples (LCS) and/or matrix spike control samples (MS) by analyzing the ampulated standard in quadruplet against a second source material from another vendor. HMX was present at 20-25% below the manufacturer's reported true value. The true value of HMX for the LCS and MS spiking standard was adjusted to compensate for this discrepancy.

MS/MSD

Please note that US EPA Methods for organic compounds do not require action by the laboratory based on out-of-specification MS/MSD results.

SAMPLE ANALYSIS:

(Sample number(s): 7265242-7265243: Analysis: 06916)
Reporting limits were raised due to interference from the sample matrix.
