Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1589100
Reported: 09/15/2015 15:41

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and the < Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, ISO17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	27	54	1
10727	4-Methylphenol	106-44-5	N.D.	27	54	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	5	27	1
10727	2-Nitroaniline	88-74-4	N.D.	27	54	1

GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	34	68	1
10727	4-Methylphenol	106-44-5	N.D.	34	68	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	7	34	1
10727	2-Nitroaniline	88-74-4	N.D.	34	68	1

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		26	51	1
10727	4-Methylphenol	106-44-5	N.D.		26	51	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		5	26	1
10727	2-Nitroaniline	88-74-4	N.D.		26	51	1
10727	3-Nitroaniline	99-09-2	N.D.		100	260	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	31	63	1
10727	4-Methylphenol	106-44-5	N.D.	31	63	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	32	1
10727	2-Nitroaniline	88-74-4	N.D.	31	63	1
10727	3-Nitroaniline	99-09-2	N.D.	130	310	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	28	57	1
10727	4-Methylphenol	106-44-5	N.D.	28	57	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	29	1
10727	2-Nitroaniline	88-74-4	N.D.	28	57	1
10727	3-Nitroaniline	99-09-2	N.D.	110	280	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	32	64	1
10727	4-Methylphenol	106-44-5	N.D.	32	64	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	10 J	6	33	1
10727	2-Nitroaniline	88-74-4	N.D.	32	64	1
10727	3-Nitroaniline	99-09-2	N.D.	130	320	1

13994	TOC Subcontracted - Spectrum	n.a.	30,300		1,320	1,330	1
	The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.						
Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	48.9		0.50	0.50	1
	Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.						

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	53,000		1,290	1,300	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	54.7		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	27,100		1,010	1,020	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	42.1		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	N.D.	28	56	1
10727	4-Methylphenol	106-44-5	N.D.	28	56	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	28	1
10727	2-Nitroaniline	88-74-4	N.D.	28	56	1
10727	3-Nitroaniline	99-09-2	N.D.	110	280	1
10727	4-Nitroaniline	100-01-6	N.D.	110	280	1
10727	Nitrobenzene	98-95-3	N.D.	28	56	1
10727	2-Nitrophenol	88-75-5	N.D.	28	56	1
10727	4-Nitrophenol	100-02-7	N.D.	280	840	1
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.	28	56	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.	28	56	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.					
10727	Di-n-octylphthalate	117-84-0	N.D.	110	280	1
10727	Pentachlorophenol	87-86-5	N.D.	56	280	1
10727	Phenanthrene	85-01-8	81	6	28	1

10727	2-Methylphenol	95-48-7	N.D.	30	59	1
10727	4-Methylphenol	106-44-5	N.D.	30	59	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	30	1
10727	2-Nitroaniline	88-74-4	N.D.	30	59	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	40.3		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	28	56	1
10727	4-Methylphenol	106-44-5	N.D.	28	56	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	29	1
10727	2-Nitroaniline	88-74-4	N.D.	28	56	1
10727	3-Nitroaniline	99-09-2	N.D.	110	280	1

13994	TOC Subcontracted - Spectrum	n.a.	41,200		1,110	1,120	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	41.5		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	39,200		1,010	1,020	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	43.1		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	28	56	1
10727	4-Methylphenol	106-44-5	N.D.	28	56	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	29	1
10727	2-Nitroaniline	88-74-4	N.D.	28	56	1
10727	3-Nitroaniline	99-09-2	N.D.	110	280	1

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	32	64	1
10727	4-Methylphenol	106-44-5	N.D.	32	64	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	32	1
10727	2-Nitroaniline	88-74-4	N.D.	32	64	1

13994	TOC Subcontracted - Spectrum	n.a.	45,600		1,370	1,390	1
	The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.						
Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	48.5		0.50	0.50	1
	Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.						

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	25,800		1,010	1,020	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	36.9		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1592598
Reported: 10/21/2015 13:21

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

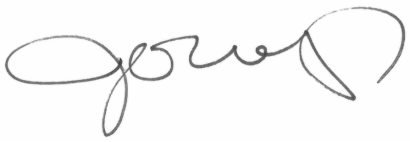
Authorized by:



June O'Connor
Laboratory Director

Eurofins Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 12 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our Quality web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 1.2 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

Lloyd Kahn

Samples:

SC13244-01 *TNT-PS-B-3-09142015*

This sample was analyzed outside the EPA recommended holding time per client request.

Sample Acceptance Check Form

Client:	Eurofins Lancaster Laboratories Environmental, LLC
Project:	See Chain of Custody / 1592598
Work Order:	SC13244
Sample(s) received on:	10/6/2015

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☑	☐	☐
Were custody seals intact?	☑	☐	☐
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples cooled on ice upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☐	☑	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☐	☑	☐

Notes and Definitions

O09	This sample was analyzed outside the EPA recommended holding time per client request.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and the < Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, ISO17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

13994	TOC Subcontracted - Spectrum	n.a.	25,600		564	569	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	33.7		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

	The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: 2,4-Dimethylphenol bis(2-Chloroethoxy)methane bis(2-Chloroethyl)ether					
00886	**SVOA TIC Interpretive(25)**					
	The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		28	56	1
10727	4-Methylphenol	106-44-5	1,200		28	56	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		6	29	1
10727	2-Nitroaniline	88-74-4	N.D.		28	56	1

10727	2,4,6-Trichlorophenol	88-06-2	N.D.	27	54	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	27	55	1
10727	4-Methylphenol	106-44-5	1,400	27	55	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	5	28	1
10727	2-Nitroaniline	88-74-4	N.D.	27	55	1
10727	3-Nitroaniline	99-09-2	N.D.	110	270	1

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		27	54	1
10727	4-Methylphenol	106-44-5	2,200		27	54	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	23	J	5	27	1
10727	2-Nitroaniline	88-74-4	N.D.		27	54	1
10727	3-Nitroaniline	99-09-2	260	J	110	270	1
10727	4-Nitroaniline	100-01-6	N.D.		110	270	1
10727	Nitrobenzene	98-95-3	N.D.		27	54	1
10727	2-Nitrophenol	88-75-5	N.D.		27	54	1
10727	4-Nitrophenol	100-02-7	N.D.		270	810	1
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		27	54	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		27	54	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		110	270	1
10727	Pentachlorophenol	87-86-5	N.D.		54	270	1

10727	Pyrene	129-00-0	110		5	27	1
10727	2,4,5-Trichlorophenol	95-95-4	N.D.		27	54	1
10727	2,4,6-Trichlorophenol	88-06-2	N.D.		27	54	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	39,200		978	986	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc.
This data entry is to enable EDD generation in the client required format.
The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	42.1		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

13994	TOC Subcontracted - Spectrum	n.a.	43,200		1,170	1,190	1

The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.

Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	43.8		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

10727	2,4,6-Trichlorophenol	88-06-2	N.D.		27	54	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
Wet Chemistry	**SM 2540 G-1997**		%	%	%	

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

	The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance: 2,4-Dimethylphenol bis(2-Chloroethoxy)methane bis(2-Chloroethyl)ether						
00886	**SVOA TIC Interpretive(25)**						
	The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		26	51	1
10727	4-Methylphenol	106-44-5	790		26	51	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	22	J	5	26	1
10727	2-Nitroaniline	88-74-4	N.D.		26	51	1
10727	3-Nitroaniline	99-09-2	130	J	100	260	1
10727	4-Nitroaniline	100-01-6	N.D.		100	260	1
10727	Nitrobenzene	98-95-3	N.D.		26	51	1
10727	2-Nitrophenol	88-75-5	N.D.		26	51	1
10727	4-Nitrophenol	100-02-7	N.D.		260	770	1
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		26	51	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		26	51	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		100	260	1
10727	Pentachlorophenol	87-86-5	N.D.		51	260	1
10727	Phenanthrene	85-01-8	82		5	26	1
10727	Phenol	108-95-2	220		26	51	1
10727	Pyrene	129-00-0	130		5	26	1
10727	2,4,5-Trichlorophenol	95-95-4	N.D.		26	51	1
10727	2,4,6-Trichlorophenol	88-06-2	N.D.		26	51	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	26	52	1
10727	4-Methylphenol	106-44-5	510	26	52	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	5	26	1
10727	2-Nitroaniline	88-74-4	N.D.	26	52	1

10727	2,4,6-Trichlorophenol	88-06-2	N.D.	26	52	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	30	59	1
10727	4-Methylphenol	106-44-5	700	30	59	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	30	1
10727	2-Nitroaniline	88-74-4	N.D.	30	59	1
10727	3-Nitroaniline	99-09-2	N.D.	120	300	1
10727	4-Nitroaniline	100-01-6	N.D.	120	300	1
10727	Nitrobenzene	98-95-3	N.D.	30	59	1
10727	2-Nitrophenol	88-75-5	N.D.	30	59	1
10727	4-Nitrophenol	100-02-7	N.D.	300	890	1
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.	30	59	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.	30	59	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.					
10727	Di-n-octylphthalate	117-84-0	500	120	300	1
10727	Pentachlorophenol	87-86-5	N.D.	59	300	1
10727	Phenanthrene	85-01-8	79	6	30	1
10727	Phenol	108-95-2	210	30	59	1
10727	Pyrene	129-00-0	190	6	30	1
10727	2,4,5-Trichlorophenol	95-95-4	N.D.	30	59	1
10727	2,4,6-Trichlorophenol	88-06-2	N.D.	30	59	1

The LCS and/or LCSD recoveries are outside the stated QC window but within the marginal exceedance allowance of +/- 4 standard deviations as defined in the NELAC Standards. The following analytes are accepted based on this allowance:
2,4-Dimethylphenol
bis(2-Chloroethoxy)methane
bis(2-Chloroethyl)ether

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

00886 SVOA TIC Interpretive(25)

The results from the semivolatile library search are listed on the attached FORM 1 - SV-TIC. The qualifiers appearing in the "Q" column are defined on the back of this form.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	29	57	1
10727	4-Methylphenol	106-44-5	N.D.	29	57	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	6	29	1
10727	2-Nitroaniline	88-74-4	N.D.	29	57	1
10727	3-Nitroaniline	99-09-2	N.D.	110	290	1
10727	4-Nitroaniline	100-01-6	N.D.	110	290	1

13994	TOC Subcontracted - Spectrum	n.a.	27,500		958	969	1
	The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.						
Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	42.6		0.50	0.50	1
	Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.						

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

13994	TOC Subcontracted - Spectrum	n.a.	28,800		1,070	1,080	1
	The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.						
Wet Chemistry	**SM 2540 G-1997**		**%**		**%**	**%**	
00111	Moisture	n.a.	36.2		0.50	0.50	1
	Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.						

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Sample Description: TNT-PS-F-4-09142015 Composite Soil Sample
Kenvil Treatability Study

LL Sample # SW 8046590
LL Group # 1592599
Account # 06716

Project Name: Kenvil TNT Bioremediaton Pilot

Collected: 09/14/2015 10:10 by SL

Submitted: 09/14/2015 20:45
Reported: 10/21/2015 13:28

FORM I SV-1

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1592599
Reported: 10/21/2015 13:28

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. These results relate only to the sample(s) as received.
All applicable NELAC requirements have been met.

Massachusetts # M-MA138/MA1110
Connecticut # PH-0777
Florida # E87936
Maine # MA138
New Hampshire # 2538
New Jersey # MA011

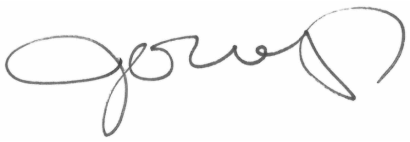
Authorized by:



June O'Connor
Laboratory Director

Eurofins Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 16 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our Quality web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 1.2 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

Lloyd Kahn

Sample Acceptance Check Form

Client:	Eurofins Lancaster Laboratories Environmental, LLC
Project:	See Chain of Custody / 1592599
Work Order:	SC13232
Sample(s) received on:	10/6/2015

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☑	☐	☐
Were custody seals intact?	☑	☐	☐
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples cooled on ice upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☐	☑	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☐	☑	☐

Notes and Definitions

O09	This sample was analyzed outside the EPA recommended holding time per client request.
TOC 1	This sample was analyzed in quadruplicate. The % RSD is 15.8.
TOC 1a	This sample was analyzed in quadruplicate. The % RSD is 16.5.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and the < Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, ISO17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	25	50	1
10727	4-Methylphenol	106-44-5	N.D.	25	50	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	5	25	1
10727	2-Nitroaniline	88-74-4	N.D.	25	50	1
10727	3-Nitroaniline	99-09-2	N.D.	100	250	1

13994	TOC Subcontracted - Spectrum	n.a.	24,000	491	496	1
	The TOC analysis was subcontracted to Eurofins Spectrum Analytical, Inc. This data entry is to enable EDD generation in the client required format. The original laboratory data report is attached. All relevant certification information is provided in that report.					
Wet Chemistry	**SM 2540 G-1997**		**%**	**%**	**%**	
00111	Moisture	n.a.	39.7	0.50	0.50	1
	Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.					

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

REVISED

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1596753
Reported: 11/10/2015 11:25

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. These results relate only to the sample(s) as received.
All applicable NELAC requirements have been met.

Massachusetts # M-MA138/MA1110
Connecticut # PH-0777
Florida # E87936
Maine # MA138
New Hampshire # 2538
New Jersey # MA011
New York # 11393
Pennsylvania # 68-04426/68-02924
Rhode Island # LAO00098
USDA # S-51435

Authorized by:

June O'Connor
Laboratory Director

Eurofins Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.
Please note that this report contains 8 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Eurofins Spectrum Analytical, Inc.

Eurofins Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our Quality web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey, Pennsylvania and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (PA-68-04426).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

CASE NARRATIVE:

Data has been reported to the RDL. This report excludes estimated concentrations detected below the RDL and above the MDL (J-Flag).

All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

The samples were received 1.2 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

There is no relevant protocol-specific QC and/or performance standards non-conformances to report.

Sample Acceptance Check Form

Client:	Eurofins Lancaster Laboratories Environmental, LLC
Project:	See Chain of Custody / 1596753
Work Order:	SC13234
Sample(s) received on:	10/6/2015

The following outlines the condition of samples for the attached Chain of Custody upon receipt.

	Yes	No	N/A
Were custody seals present?	☑	☐	☐
Were custody seals intact?	☑	☐	☐
Were samples received at a temperature of ≤ 6°C?	☑	☐	☐
Were samples cooled on ice upon transfer to laboratory representative?	☑	☐	☐
Were sample containers received intact?	☑	☐	☐
Were samples properly labeled (labels affixed to sample containers and include sample ID, site location, and/or project number and the collection date)?	☑	☐	☐
Were samples accompanied by a Chain of Custody document?	☑	☐	☐
Does Chain of Custody document include proper, full, and complete documentation, which shall include sample ID, site location, and/or project number, date and time of collection, collector's name, preservation type, sample matrix and any special remarks concerning the sample?	☐	☑	☐
Did sample container labels agree with Chain of Custody document?	☑	☐	☐
Were samples received within method-specific holding times?	☑	☐	☐

Notes and Definitions

dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

10727	2-Methylphenol	95-48-7	N.D.		160	330	5
10727	4-Methylphenol	106-44-5	N.D.		160	330	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		33	170	5
10727	2-Nitroaniline	88-74-4	N.D.		160	330	5

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

00111	Moisture	n.a.	42.6		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	N.D.		140	280	5
10727	4-Methylphenol	106-44-5	N.D.		140	280	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		28	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	280	5
10727	3-Nitroaniline	99-09-2	N.D.		560	1,400	5
10727	4-Nitroaniline	100-01-6	N.D.		560	1,400	5
10727	Nitrobenzene	98-95-3	N.D.		140	280	5
10727	2-Nitrophenol	88-75-5	N.D.		140	280	5
10727	4-Nitrophenol	100-02-7	N.D.		1,400	4,200	5
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		140	280	5
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		140	280	5
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		560	1,400	5
10727	Pentachlorophenol	87-86-5	N.D.		280	1,400	5

10727	2-Methylphenol	95-48-7	N.D.		140	280	5
10727	4-Methylphenol	106-44-5	N.D.		140	280	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		28	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	280	5

10727	2-Methylphenol	95-48-7	N.D.		140	280	5
10727	4-Methylphenol	106-44-5	N.D.		140	280	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	280	5
10727	3-Nitroaniline	99-09-2	N.D.		550	1,400	5
10727	4-Nitroaniline	100-01-6	N.D.		550	1,400	5

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

00111	Moisture	n.a.	37.6		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	N-Nitrosodiphenylamine	86-30-6	N.D.		130	270	5
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		530	1,300	5

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		140	270	5
10727	4-Methylphenol	106-44-5	1,600		140	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	28	J	27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	270	5

10727	2-Methylphenol	95-48-7	N.D.		140	290	5
10727	4-Methylphenol	106-44-5	2,000		140	290	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		29	150	5
10727	2-Nitroaniline	88-74-4	N.D.		140	290	5

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		130	250	5
10727	4-Methylphenol	106-44-5	360		130	250	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		25	130	5
10727	2-Nitroaniline	88-74-4	N.D.		130	250	5
10727	3-Nitroaniline	99-09-2	N.D.		500	1,200	5
10727	4-Nitroaniline	100-01-6	N.D.		500	1,200	5
10727	Nitrobenzene	98-95-3	N.D.		130	250	5
10727	2-Nitrophenol	88-75-5	N.D.		130	250	5

10727	2,4,5-Trichlorophenol	95-95-4	N.D.		130	250	5
10727	2,4,6-Trichlorophenol	88-06-2	N.D.		130	250	5

Reporting limits were raised due to interference from the sample matrix.

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The client was contacted and the data reported.

FORM I SV-1

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1600457
Reported: 11/11/2015 08:54

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods. Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

10727	4-Methylphenol	106-44-5	N.D.		140	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	270	5

10727	2-Methylphenol	95-48-7	N.D.		130	270	5
10727	4-Methylphenol	106-44-5	N.D.		130	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		130	270	5
10727	3-Nitroaniline	99-09-2	N.D.		540	1,300	5

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	N.D.		140	280	5
10727	4-Methylphenol	106-44-5	2,000		140	280	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		28	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	280	5

00111	Moisture	n.a.	40.5		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		140	270	5
10727	4-Methylphenol	106-44-5	2,900		140	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	270	5
10727	3-Nitroaniline	99-09-2	N.D.		550	1,400	5
10727	4-Nitroaniline	100-01-6	N.D.		550	1,400	5
10727	Nitrobenzene	98-95-3	N.D.		140	270	5
10727	2-Nitrophenol	88-75-5	N.D.		140	270	5
10727	4-Nitrophenol	100-02-7	N.D.		1,400	4,100	5
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		140	270	5
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		140	270	5
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		550	1,400	5
10727	Pentachlorophenol	87-86-5	N.D.		270	1,400	5

10727	2-Methylphenol	95-48-7	N.D.		130	270	5
10727	4-Methylphenol	106-44-5	1,000		130	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		130	270	5

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.		140	270	5
10727	4-Methylphenol	106-44-5	200	J	140	270	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		27	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	270	5

CAT No.	Analysis Name	CAS Number	Dry Result	Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**	**ug/kg**	**ug/kg**	
10727	2-Methylphenol	95-48-7	N.D.	660	1,300	5
10727	4-Methylphenol	106-44-5	N.D.	660	1,300	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
10727	Naphthalene	91-20-3	N.D.	130	680	5
10727	2-Nitroaniline	88-74-4	N.D.	660	1,300	5
10727	3-Nitroaniline	99-09-2	N.D.	2,700	6,600	5

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	N.D.		140	280	5
10727	4-Methylphenol	106-44-5	N.D.		140	280	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		28	140	5
10727	2-Nitroaniline	88-74-4	N.D.		140	280	5
10727	3-Nitroaniline	99-09-2	N.D.		560	1,400	5

10727	2-Methylphenol	95-48-7	N.D.		130	250	5
10727	4-Methylphenol	106-44-5	N.D.		130	250	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		25	130	5
10727	2-Nitroaniline	88-74-4	N.D.		130	250	5

10727	2-Methylphenol	95-48-7	N.D.		130	250	5
10727	4-Methylphenol	106-44-5	N.D.		130	250	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		25	130	5
10727	2-Nitroaniline	88-74-4	N.D.		130	250	5
10727	3-Nitroaniline	99-09-2	N.D.		500	1,300	5

FORM I SV-1

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1600458
Reported: 11/11/2015 11:41

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods. Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

10727	2-Methylphenol	95-48-7	N.D.		160	320	5
10727	4-Methylphenol	106-44-5	N.D.		160	320	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		31	160	5
10727	2-Nitroaniline	88-74-4	N.D.		160	320	5
10727	3-Nitroaniline	99-09-2	N.D.		630	1,600	5

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

General Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	2-Methylphenol	95-48-7	N.D.		150	300	5
10727	4-Methylphenol	106-44-5	N.D.		150	300	5
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	N.D.		30	150	5
10727	2-Nitroaniline	88-74-4	N.D.		150	300	5
10727	3-Nitroaniline	99-09-2	N.D.		610	1,500	5
10727	4-Nitroaniline	100-01-6	N.D.		610	1,500	5

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1600462
Reported: 11/11/2015 09:33

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods. Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1608680
Reported: 12/03/2015 16:15

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Technical Memorandum – Post-Study Monitoring of TNT Pilot Study Soil

21 June 2019

Memorandum

To: Mr. Edward Meeks – Hercules LLC

From: Mr. Scott Larew – Kennedy Jenks Consultants

Subject: TNT Project Area Soil Bioremediation Pilot Study Addendum
KJ 1540001*57

Background

On behalf of Hercules LLC (Hercules), Kennedy Jenks Consultants (KJ) prepared this technical memorandum summarizing results of long-term monitoring of the TNT bioremediation pilot study (pilot study) soil at the Hercules' Kenvil Works Facility, located in Kenvil, Morris County, New Jersey (the Facility). The pilot study assessed ex-situ bioremediation approaches to address target constituents[1] in Facility soil. The pilot study design, methods, conclusions, and recommendations are presented in the *TNT Soil Bioremediation Pilot Study Report* (Hercules 2017) (Pilot Study Report) (**Attachment 3** to the *TNT Project Area Soil Remedial Action Work Plan* [TNT RAWP]).

The Pilot Study Report presents monitoring results from the 84-day study period, as well as a 30-day post study sampling event. Treated soil remained in the study boxes following the pilot study period to monitor ongoing degradation of target constituents without active study management. Additional long-term monitoring occurred at 12-, 18-, and 24-months post study, following preparation of the Pilot Study Report. This technical memorandum presents the results of these long-term monitoring events.

The long-term monitoring data presented herein establishes a Facility-specific technical basis for the in-situ biodegradation phase of the remedy presented in the TNT RAWP.

Post-Study Monitoring

Monitoring during the pilot study period relied on two separate sampling approaches. Three events (i.e., Study Days 0, 57, and 84) collected multiple discrete samples per trial to monitoring the degradation of target constituents as well as assess the homogeneity of the material within individual study boxes. The remaining events collected a single 4-part composite from each trail to monitor target constituent degradation. Based on the homogeneity observed in the pilot study data, post-study soil sample collection and handling procedures used were consistent with the single 4-part composite approach. Consistent with pilot study monitoring, long-term monitoring

[1] As established in the TNT RAWP, target constituents include: 2,4,6-trinitrotoluene (TNT), 2,4-dinitrotoluene (2,4-DNT), 2,6-DNT, 2-amino-4,6-DNT (2ADNT), and 4-amino-2,6-DNT (4ADNT).

© Kennedy/Jenks Consultants, Inc.

composite samples were submitted to Eurofins Lancaster Laboratories Environmental for analysis.

Each of the three post-study sampling events (i.e., 12-, 18-, and 24-month) assessed various study trails (study boxes), with a focus on monitoring the progress of target constituent degradation in the DARAMEND OE® trails. The following table summarizes the trials evaluated during each monitoring event and associated analytical testing parameters.

Trials	Post-Study Event (month)		
	12	***18***	***24***
Analytes	***SVOC, E&E, TOC***	***SVOC, E&E, Metals, Hg, TOC***	***E&E***
A – Control (no water/no turn)	Y	Y	
B – Control (water/single turn)		Y	
C – Control (water/cyclical turn)		Y	
D – DARAMEND OE® (4%, cyclical turn)	Y	Y	Y
E – DARAMEND OE® (3%, cyclical turn)	Y	Y	Y
F – DARAMEND OE® (2%, cyclical turn)	Y	Y	Y
G – DARAMEND OE® (4%, single turn)	Y	Y	Y
H – DARAMEND OE® (3%, single turn)	Y	Y	Y
I – DARAMEND OE® (2%, single turn)	Y	Y	Y
J – Wood Chips (10%, cyclical turn)		Y	
K – Wood Chips (10%, single turn)	Y	Y	

Notes:
SVOC: Semi-Volatile Organic Compounds via United States Environmental Protection Agency (USEPA) SW-846 8270C
E&E: Nitroaromatics and Nitramines via USEPA SW-846 8330
TOC: Total Organic Carbon via Lloyd Kahn Method
Metals: Target Analyte List Metals via USEPA SW-846 6010B
Hg: Mercury via USEPA SW-846 7471A

Table 1 presents the results of the baseline sampling and cyclical sampling events for study constituents. From these data, Hercules updated the target constituent degradation tracking table (**Table 2**) (originally presented as Table 4 in the Pilot Study Report).

Exhibit 1 presents analytical laboratory packages. Electronic data deliverables (EDDs) corresponding to the post-study data were generated in NJDEP's HAZSITE format, checked for errors using NJDEP's Electronic Data Submission Application (EDSA) (Version 7.1.5; Last updated September 2016), and submitted electronically to NJDEP via email.

 © Kennedy/Jenks Consultants, Inc.

As shown in **Table 2**, long-term monitoring identified:

- Biodegradation of target constituents in soil in DARAMEND OE® trials continues to occur following active management.

- Long-term monitoring documented a 63 percent reduction of target constituent concentrations (based on Total Nitrotoluenes[2]) across DARAMEND OE® trials in the 18 months following the pilot study monitoring period.

- Total removal efficiency across DARAMEND OE® trials averaged 99.5 percent for target constituents, with target constituent concentrations attaining NJDEP non-residential direct contact soil remediation standards (NRDCSRS) at the end of the pilot study monitoring period, and residential direct contact soil remediation standards (RDCSRS) by the end of the long-term monitoring period.

Long-Term Monitoring Conclusions

The pilot study demonstrated the effectiveness of bioremediation using DARAMEND OE® to degrade target constituents in soil in a single field season. Long-term monitoring of DARAMEND OE® trials quantified post-study target constituent concentration reductions following the conclusion of active study management.

Overall, long-term monitoring demonstrated that bioremediation using a commercially-available amendment is a viable mass reduction component of a comprehensive remedy for target constituents in the TNT Project Area. Residual constituent mass (i.e., concentrations greater than IGWSRS) will be addressed via the lasting effects of the amendment in soil (i.e., DARAMEND OE® continues to support biological breakdown for approximately 5 years (**Appendix H** to the TNT RAWP). Natural attenuation by native microbial communities will continue following the effective timeframe of DARAMEND OE® and will be the final remedy for soil and groundwater.

Notes:
SRS = Soil Remediation Standard
IGW = Impact to Groundwater
RDC = Residential Direct Contact
NRDC = Non Residential Direct Contact
NA = Not Analyzed
NS = No screening standard available
U = Consituent not detected, associated value is laboratory detection limit
J = Estimated concentration
ug/kg = microgram per kilogram
mg/kg = milligram per kilgram
Bolded values indicate a concentration above IGWSRS
Underlined values indicate a concentration above RDCSRS
Shaded values indicate a concentration above NRDCSRS

Notes:
SRS = Soil Remediation Standard
IGW = Impact to Groundwater
RDC = Residential Direct Contact
NRDC = Non Residential Direct Contact
NA = Not Analyzed
NS = No screening standard available
U = Consituent not detected, associated value is laboratory detection limit
J = Estimated concentration
ug/kg = microgram per kilogram
mg/kg = milligram per kilgram
Bolded values indicate a concentration above IGWSRS
Underlined values indicate a concentration above RDCSRS
Shaded values indicate a concentration above NRDCSRS

FORM I SV-1

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1725898
Reported: 01/17/2017 13:07

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Blank	76
LCS	110
MS	105
MSD	95
Limits:	65-129

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	none detected
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…
W - The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		24	48	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		24	48	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		97	240	1

CAT No.	Analysis Name	CAS Number	Dry Result		Dry Method Detection Limit*	Dry Limit of Quantitation	Dilution Factor
GC/MS Semivolatiles	**SW-846 8270C**		**ug/kg**		**ug/kg**	**ug/kg**	
10727	2-Methylnaphthalene	91-57-6	5	J	5	25	1
10727	2-Methylphenol	95-48-7	N.D.		24	48	1
10727	4-Methylphenol	106-44-5	2,300		24	48	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.						
10727	Naphthalene	91-20-3	6	J	5	25	1
10727	2-Nitroaniline	88-74-4	N.D.		24	48	1
10727	3-Nitroaniline	99-09-2	N.D.		96	240	1
10727	4-Nitroaniline	100-01-6	N.D.		96	240	1
10727	Nitrobenzene	98-95-3	N.D.		24	48	1
10727	2-Nitrophenol	88-75-5	N.D.		24	48	1
10727	4-Nitrophenol	100-02-7	N.D.		240	720	1
10727	N-Nitroso-di-n-propylamine	621-64-7	N.D.		24	48	1
10727	N-Nitrosodiphenylamine	86-30-6	N.D.		24	48	1
	N-nitrosodiphenylamine decomposes in the GC inlet forming diphenylamine. The result reported for N-nitrosodiphenylamine represents the combined total of both compounds.						
10727	Di-n-octylphthalate	117-84-0	N.D.		96	240	1
10727	Pentachlorophenol	87-86-5	N.D.		48	250	1

FORM I SV-1

Quality Control Summary

Client Name: Hercules Incorporated Group Number: 1799663
Reported: 06/01/2017 09:28

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result	MDL**	LOQ
	ug/kg	ug/kg	ug/kg
Batch number: 17132SLM026	Sample number(s): 8986363-8986373

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.
P###### is indicative of a Background or Unspiked sample that is batch matrix QC and was not performed using a sample from this submission group.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	none detected
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…
W - The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

06918	RDX	121-82-4	N.D.		170	380	1
06918	Tetryl	479-45-8	N.D.		200	510	1
06918	1,3,5-Trinitrobenzene	99-35-4	N.D.		130	380	1
06918	2,4,6-Trinitrotoluene	118-96-7	2,300		130	380	1

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial. Similar results were obtained in both trials.

Wet Chemistry	**SM 2540 G-1997 %Moisture Calc**		**%**		**%**	**%**	
00111	Moisture	n.a.	21.3		0.50	0.50	1

Moisture represents the loss in weight of the sample after oven drying at 103 - 105 degrees Celsius. The moisture result reported is on an as-received basis.

Sample Comments

State of New Jersey Lab Certification No. PA011

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: Hercules Incorporated
Reported: 11/16/2017 14:54

Group Number: 1853714

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Stephen/Jenifer,

I just received this copy of the COC for the samples received by ELLE.

We'd like these samples to be run for Energetics and Explosives by Method 8330. The COC indicates Metals and TOC - that is an error based on the description on a previous bottle order.

Please confirm receipt of this email and that the proper analysis will be conducted. Apologies for the confusion on our end.

Thanks.
-Scott

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	non-detect
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Subject: ***TNT Soil Plant Design Verification Study Report***
Former Hercules Kenvil Works Facility
Kenvil, New Jersey

Mr. Meeks:

On behalf of Hercules Incorporated (Hercules), ART Engineering LLC (ART) and Kennedy/Jenks Consultants, Inc. (Kennedy/Jenks) prepared the attached *TNT Soil Plant Design Verification Study Report* (the Report) presenting results of soil processing plant design verification studies conducted between October 16 and 27, 2017 at the Former Hercules Kenvil Works Facility (the Facility).

BACKGROUND

Since 2013, Hercules has conducted bench and field-scale pilot studies to develop, test, and refine the bioremediation remedy to address 2,4,6-trinitrotoluene (TNT) at the Facility. The current approach to TNT remediation in Facility soils involves TNT particle size reduction using a physical processing plant and delivering processed soil to Bio Cells for engineered bioremediation. The *TNT Soil Bioremediation Pilot Study Report* (Hercules 2017) summarized the findings of the field-scale pilot study evaluating enhanced biodegradation techniques. The pilot study demonstrated the effectiveness of bioremediation using commercially-available DARAMEND OE® to degrade TNT and breakdown products in soil and attain direct contact remediation standards in a single field season.

In follow up to the pilot study, Hercules completed a preliminary design of the full-scale soil processing plant. The design process identified a number of estimates and input parameters that required confirmation before progressing to final plant design and engineering. As a result, the ART-Kennedy/Jenks team developed a series of process verification studies to confirm and/or refine design elements of the soil processing plant component of the TNT bioremediation remedy.

DESIGN VERIFICATION STUDY IMPLEMENTATION

Process verification studies were conducted on composite soil samples collected from representative source areas requiring remediation in the TNT Area at the Facility (hereafter referred to as the "uphill" and "downhill" areas).

Studies focused on the following plant design parameters and variables:

- Confirmation of soil particle size distribution (oversize, sand, fines) in "uphill" and "downhill" areas
- Design parameters for drum scrubber
- Attrition scrubber evaluation and post-attrition assessment of particle size and TNT concentration
- Polymer dosage and strength assessment
- Bench-scale simulations of proposed soil plant processes
- Analytical evaluation of TNT concentrations in various particle size fractions before and after process simulation steps

Results and findings related to these process verification studies, described in the attached Report, generally confirmed estimates and aligned with previous assessments related to process design elements, including:

- Particle size distribution data for "uphill" and "downhill" areas align with previously-collected data and design assumptions regarding distribution of oversize, sand, and fines
- Drum scrubber simulation achieved approximately 95% TNT concentration reduction in the target oversize fraction; effectiveness may be enhanced with addition of a "charge" (i.e., large rocks or steel balls)
- A coarse attrition scrubber, not contemplated during preliminary design, effectively reduces TNT particle size such that TNT mass is transferred to the fine oversize fraction for additional processing

- Polymer dosage was optimized, and flocculation effectiveness enhanced via the addition of iron(III)-sulfate (coagulant) and active pH neutralization

The processes tested and information generated during the study demonstrated:

- The overall process effective concentrates TNT in sand and fine particle fraction for enhanced bioremediation using DARAMEND OE®
- Process modifications (addition of coarse drum scrubber) improved the reductions in TNT concentrations in oversize fractions
- Variability in source material grain size distribution and constituent concentrations can be managed with an excavation, blending and staging plan

The latter two items are discussed in more detail in the following sections.

MANAGEMENT OF OVERSIZE FRACTIONS

Study analytical results indicate that TNT in unprocessed "uphill" and "downhill" soils is generally concentrated in sand and fine particle fractions, with larger chunks distributed throughout the coarser fractions. Based on current process plant design (Figures 1 and 2 of attached Report), coarse oversize (+1/2" – 2") and fine oversize (+2mm – ½") are screened out of the process plant following the drum scrubber and coarse attrition scrubber, respectively. The drum scrubber and coarse attrition scrubber steps in the process plant design subject oversize material to aggressive scrubbing followed by wet screening to reduce TNT particle sizes and separate sand and fine particle fractions from the oversize; yielding an oversize fraction visibly free of TNT (e.g., washed stone).

Analytical data collected during process verification studies indicate the drum scrubber and coarse attrition scrubbing steps attain TNT reduction efficiencies exceeded 95 percent. Average baseline (i.e., feed) concentrations of TNT in composite samples generated from "uphill" and "downhill" areas as part of process verification studies were 12,500 mg/kg and 6,300 mg/kg, respectively. Given these initial concentrations, post-processing TNT concentrations in each of these two oversize fractions exceeded New Jersey Department of Environmental Protection (NJDEP) Non-Residential Direct Contact Soil Remediation Standards (NRDCSRS). Additional study of these oversize fractions is recommended to identify handling and process options and/or modifications capable of achieving TNT concentrations that will facilitate onsite reuse of these fractions. These additional activities will also include an evaluation of the range of feed concentrations expected at full scale. This evaluation would rely on SI/RI data as well as refined delineation data generated concurrent with design verification study data, and incorporate a spatial weighting approach.

As noted above, design verification study feed concentrations ranged from 6,300 mg/kg to 12,500 mg/kg. Efforts to source material for the design verification work focused on areas of

representative grain size distribution and the presence of TNT chunks. In contrast, the material sourced for the pilot study represented a range of potential TNT concentrations, resulting in an average feed concentration of 2,000 mg/kg. The average concentrations of the more than 250 SI/RI samples from the TNT Area and more than 400 refined delineation samples are approximately 1,400 mg/kg and 650 mg/kg, respectively. Based on available information, a full-scale feed concentration in the 2,000 mg/kg range appears reasonable.

Applying the above-referenced process efficiencies to a feed concentration of 2,000 mg/kg (as measured during pilot study activities) results in TNT concentrations less than NJDEP NRDCSRS in coarse and fine oversize fractions. That said, it is unknown if TNT reduction efficiencies measured during process verification studies can be applied linearly to feed soil with different TNT concentrations.

In addition to evaluating compliance with NJDEP direct contact standards for oversize soil fractions, impact to groundwater standards must also be considered as part of both regulatory compliance and reuse onsite. Laboratory analysis of coarse and fine oversize material (maintained onsite following study completion) via Synthetic Precipitation Leaching Procedure (SPLP) is recommended to evaluate mobility of TNT in oversize fractions generated during process simulations. The SPLP analysis method, which simulates in-situ conditions for soils exposed to precipitation, represents an efficient and effective means of evaluating TNT mobility in coarse and fine oversize material in support of anticipated on-site reuse of treated TNT area soils. SPLP data will be combined with ongoing Facility-specific impact-to-groundwater (IGW) evaluations to form a basis for recommended on-site reuse of oversize product fractions.

EXCAVATION, BLENDING, AND STAGING PLAN

A full-scale soil processing plant will run most efficiently when the feed material is well blended. The goal of the blending is to achieve a consistent mixture with respect to both physical (grain size distribution) and chemical (contaminant concentration) characteristics. Consistency in feed at the front end of the plant will result in a predictable production rate of biofeed (sand/fines) and oversize fractions. These predictable rates will result in consistencies and efficiencies related to amendment (DARAMEND OE, polymer) dosages as well as labor and equipment allocation (management of oversize stockpiles).

As previously noted, an average feed concentration of approximately 2,000 mg/kg can be expected at full scale after blending high concentration source area soil containing crystalline TNT with soil from adjacent areas with lower TNT concentrations. Observed variability in feed soil concentrations, and its potential effects throughout the soil processing plant, highlight the importance of preparing and blending feed soil in the field prior to introduction to the soil processing plant. Preparing and blending soils from different areas and with varying TNT concentration will assist with maintaining relatively consistent feed concentrations to the plant. An excavation, blending, and staging plan is recommended to guide these efforts and represents an integral component of process plant design.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions and recommendations of process verification studies performed by ART and Kennedy/Jenks are summarized below.

Conclusions

- Data and findings obtained from process verification studies include particle size distribution, drum scrubber design and effectiveness, attrition scrubber design and effectiveness, and polymer dosing and strength requirements.

- Process verification study results indicate preliminary soil process plant designs are effective at concentrating TNT in sand and fine particle fractions (which will be processed to Bio Cells for DARAMEND OE® treatment and subsequent bioremediation) and reducing TNT concentrations in oversize fractions by over 95 percent.

Recommendations

- Kennedy/Jenks recommends additional evaluation of coarse and fine oversize product fractions which will be screened out of the soil processing plant prior to Bio Cell bioremediation. Additional evaluation of coarse and fine oversize product fractions will support approval of on-site reuse of these materials.

- Based on varying TNT concentrations measured in “feed” soils, ART and Kennedy/Jenks recommend development of an Excavation, Blending, Staging Plan that synthesizes existing soil data and outlines an excavation strategy to maintain a generally consistent feed concentration at the processing plant.

If you have any questions regarding this information provided in this report, please call me at (609) 285-2626.

Very truly yours,

TNT Soil Plant Design Verification Study Report

Located at:
Former Kenvil Works Facility
Hercules, LLC
Kenvil, New Jersey

Prepared for:
Kennedy/Jenks Consultants, Inc.

By:
ART Engineering, LLC

November 29, 2017

Executive Summary

ART Engineering, LLC (ART) has completed the Process Design Verification/Confirmation field study at the former Kenvil Works Facility located in Kenvil, New Jersey. The main purpose of the study was to verify the original process design (Ref. *TNT Soil Bioremediation Project, Kenvil Works Facility, April 2017, by ART Engineering, LLC*) to create a bio-feed for subsequent bioremediation, and to achieve the lowest possible TNT concentration in the oversize fractions. This study included characterization of both "uphill" and "downhill" composite samples (containing 12,500 and 6,300 ppm TNT respectively), individual unit process testing, and two process simulations. The TNT levels in the process testing for this study were higher as compared to average TNT level of 2,000 ppm encountered during the 2015 Physical Separation and Bioremediation Pilot Study.

The process verification testing indicated that a design modification (Figure 1) would result in more aggressive treatment of the oversize fractions, and higher quality process oversize products. These design changes were verified in Process Simulation Testing for both the "uphill" and "downhill" composite soil samples.

Average TNT removal efficiencies ranging from 95% to 99% were achieved for both coarse oversize (+½ -inch minus 2-inch), and fine oversize (+2 mm minus ½-inch) products (Figures 2 and 3). No visible TNT was observed in either post-treatment fraction. The average feed during the bioremediation Pilot Study was 2,000 ppm TNT. When these process efficiencies as achieved in this study are applied to a hypothetical feed material at 2,000 ppm TNT, the coarse oversize after treatment contains 57 ppm TNT, and the fine oversize contains 36 ppm TNT. See Figure 1 for details.

Design modifications required to obtain these efficiencies are:

- Change the primary screen deck size from 4 mm to 2 mm;
- Change the post drum scrubber wet screen size from 4 mm to ½-inch;
- Add a coarse attrition scrubber for treatment of the minus ½-inch drum scrubber undersize.

Other conclusions based on this study are:

- The drum scrubber will require the addition of plus 3-inch stone to assist in the breakdown of large-size TNT particulates greater than ½-inch in the drum scrubber;
- The sand attrition scrubber is effective in additional breakdown of sand-sized (0.106 to 2 mm) TNT particles;
- Iron Sulfate improves clarification of process water;
- The chosen polymer is very effective in producing strong flocs able to withstand a 3 foot drop at the bio cell;
- The DARAMEND additive can be effectively added to the final minus 2 mm sand-fines-TNT bio-feed slurry, and flocculated within the soil matrix, when pumped

into the bio-cell. This approach provides optimum mixing of DARAMEND, and eliminates the need for separate handling and stirring of DARAMEND at the bio-cell.

Following are a summary of testing details, photos taken during the study, data tables, data sheets, and supporting analytical. Photos 10, 11 and 12 are indicative of the plant products.

1.0 Study Tasks Performed

Specific tasks performed as part of this study were as follows:

1. Initial characterization of overall general particle size distribution; oversize (2 mm to 2-inch), sand (0.106 to 2 mm), fines (less than 0.106 mm) for “uphill’ and “downhill” composites
2. Determination of TNT concentration as function of particle size;
3. Verification optimum primary wet screen size at 4 mm;
4. Verification of effectiveness of drum scrubber, and oversize wet screen;
5. Simulation of drum scrubber effectiveness to breakdown coarse TNT particulate matter. Determination of need for addition of coarse rock to enhance TNT breakdown;
6. Verification of effectiveness of the attrition scrubber to breakdown fine TNT particulate matter in soil fraction 2.0-4.0 mm to less than 2 mm;
7. Re-verification of selected polymer for strength, and evaluate use of Iron(III)-Sulfate as coagulant;
8. Perform process simulation for “uphill” and “downhill” composites;
9. Inspection of existing equipment for full-scale application;

Extra Tasks Performed:

10. Determination of Estimated Soil Bulk Density;
11. Acetone Extraction of Coarse Fractions.

2.0 Study Outcome

This study was performed by ART in the period of October 16 through 27, 2017. Two composite samples were prepared and used for this study. One “uphill” composite, and one “downhill” composite prepared from soils previously excavated from respective areas by Kennedy/Jenks.

2.1 Initial Characterization of Overall General Particle Size Distribution; Oversize, Sand, Fines for “Uphill’ and “Downhill” Composites, and TNT Concentration as Function of Particle Size

Results of the particle size distribution for both “uphill” and “downhill” composites are provided in Table 1. Results of TNT analysis as function of particle size are provided in Table 2.

The particle size distribution for “uphill” and “downhill” composites were consistent with prior results. The “uphill” composite contains more fines material (fraction less than 0.106 mm), and less coarse oversize (fraction +½-inch to 2-inch). These

differences will be considered in the final plant design, but these particle size results are consistent with data from previous studies.

2.2 Verification of Optimum Primary Wet Screen Size at 4 mm

In the original design, it was planned that the soil fraction 2 to 4 mm would pass through the attrition scrubber together with the sand fraction 0.106 to 2.0 mm. Although the scrubbing reduced the TNT levels in the soil fraction 2.0 to 4.0 mm from 7,100 to 830 mg/kg TNT in the "uphill" composite, and from 2,700 to 860 mg/kg TNT in the "downhill" composite after 10 minutes scrubbing, a higher removal efficiency was desirable. Also, the TNT analysis as function of particle size (Table 2) also indicated significant concentration of TNT in soil fractions greater than 4.0 mm. Considering these factors, it was proposed and tested as part of this study to treat the entire oversize fraction 2.0 mm to ½-inch in a "Coarse Attrition Scrubbing" step.

The results of the "Coarse Attrition Scrubbing" showed an improvement in TNT reduction. TNT levels in the Fine Oversize 2.0 mm to ½-inch were reduced from 12,500 ppm to 150 ppm TNT for the "uphill" soil composite and from 6,300 ppm to 150 ppm TNT for the "downhill" composite. TNT reduction efficiency was on the order of 97-98% in the post-attrition Fine Oversize 2.0 mm to ½-inch, as compared to the feed soil. This improved efficiency, combined with the fact that more of the oversize would be subjected to aggressive coarse scrubbing, resulted in the following design modification:

- Change the primary screen deck size from 4 mm to 2 mm;
- Change the post-drum scrubber wet screen size from 4 mm to ½- inch;
- Add a coarse attrition scrubber for treatment of the minus ½-inch drum scrubber undersize.

2.3 Verification of Effectiveness of Drum Scrubber and Oversize Wet Screen

The drum scrubber effectiveness to breakdown particulate TNT was tested dropping a 5-gallon bucket of oversize material (2 mm to 2-inch) into a wheelbarrow 15 times from 7 feet high. The 15 times simulated 15 drops inside a rotating drum scrubber. After the drop test, the material was screened at plus ½ inch and no visible TNT was observed in the soil fraction greater than ½-inch. The material less than ½-inch would be subjected to the "Coarse Attrition Scrubbing" as per the modified design (Figure 1). The observations of this test indicated that a charge of 3-inch rock inside the drum scrubber would provide additional energy to further breakdown softer brittle TNT material. This provision will be incorporated into the final plant design.

2.4 Verification of Effectiveness of Attrition Scrubber to Breakdown Fine TNT Particulate Matter in Soil Fraction 2.0-4.0 mm to Less than 2 mm

Refer to explanation of Section 2.2 regarding rationale for the design change. Although the attrition scrubber was effective in reducing the TNT concentration in the soil fraction 2.0-4.0 mm, a design change was made to get higher process efficiency for the entire Fine Oversize Fraction 2.0 mm to ½-inch as explained in Section 2.2.

2.5 Re-verification of Selected Polymer for Strength and Evaluate Use of Iron (III)-Sulfate as Coagulant

ART tested different concentrations of previously selected polymer FBS C1082 for effective flocculation of a mixed slurry of sand, fines, and DARAMEND. The polymer FBS C1082 was found to be effective in flocculating the slurry mixture of sand, fines, and DARAMEND into a strong "popcorn" floc, which was determined strong enough to hold up after a three foot drop simulating discharge into the bio-cell. The effective dosage in this study was determined at 3.2 lbs of neat polymer FBS C1082 per ton of plant feed for "uphill" Soil. The "uphill" soil with higher fines content requires the highest polymer dosage, as polymer dosage generally increases based on the amount of fines. It was also observed in this study that a greater polymer dose would further increase floc strength. Actual polymer dosage will be dependent on field conditions, and may be higher or lower as compared to the dosage determined in this study. It was also noted that the clarity of the process water was improved when Iron(III)-Sulfate was used as a coagulant. It is likely that the use of Iron(III)-Sulfate would also reduce polymer consumption in field operation based on ART's previous project experience. For these reasons, use of Iron(III)-Sulfate as 50% solution as a supporting coagulant is recommended for use in full-scale project implementation. As Iron(III)-Sulfate Solution is acidic, active pH neutralization using Sodium Hydroxide (25%) will also be incorporated into the full-scale design.

2.6 Perform Process Simulation for "Uphill" and "Downhill" Composites

ART performed two process simulations for the modified process design. The process simulations involved execution of processing steps that are part of the modified process design. Results of the process simulation for the "uphill" and "downhill" composites are presented in Figures 2 and 3. Concentration of TNT in the feed (prior to processing) for the "uphill" composite was 12,500 ppm TNT and 6,300 ppm TNT for the "downhill" composite. The process efficiencies achieved in the process simulations for reduction of TNT in the Coarse Oversize (½-inch to 2-inch) and Fine Oversize (2mm to ½-inch) were calculated and averaged. The calculated average process efficiency was applied to a hypothetical Plant Feed of 2,000 ppm TNT, similar to the plant feed as encountered during the 2015 Physical Separation and Bioremediation Pilot Study. The

expected TNT levels in Coarse and Fine Oversize Products after processing are presented in Figure 1. The results suggest that TNT levels in the Coarse and Fine Oversize fractions are expected to be below Industrial Standard of 95 ppm TNT.

2.7 Inspection of Existing Equipment for Full-Scale Application

ART inspected the equipment for possible reuse in the full-scale plant. The following equipment is believed to be reusable in the full-scale plant after reconditioning: Feed Conveyor, Wet Screen, and Sand Screw. The electrical control panel may be reusable as a satellite panel for the full-scale project, but would require modification. ART recommends that, at the appropriate time, this equipment is shipped back to Florida for reconditioning, and incorporation into the full-scale plant. Reuse of the two poly-tanks is not contemplated at this time, due to concerns of aging and degradation of the poly-tanks.

2.8 Extra Task: Determination of Estimated Soil Bulk Density

At the request of Kennedy/Jenks, ART determined the estimated bulk density of the "uphill" and "downhill" soil composites. The bulk density was estimated by compacting soil in a 5-gallon bucket, and determining the weight/volume ratio. Results were as follows:

Soil Bulk Density Estimates

	Soil Fraction - 2"	Whole Soil, including +2"
Uphill Soil Bulk Density:	1.34 t/cy	1.38 t/cy
Downhill Soil Bulk Density:	1.61 t/cy	1.61 t/cy

Gross Oversize (+2")

	Soil Fraction - 2"	Gross Oversize +2"	Total
Uphill Soil:	93.1 %	6.9 %	100%
Downhill Soil:	99.7%	0.3%	100%

2.9 Extra Task: Acetone Extraction of Coarse Material Samples

To evaluate TNT levels in the coarse soil fractions (greater than 2 mm), ART developed a field procedure to perform a quick Acetone extraction on coarse soil samples, and submit the Acetone extract for analysis (Attachment 6). It was noted that the total

concentration of TNT in the Acetone extract was dependent on contact time and agitation. Therefore, any of the TNT results reported in this report are only indicative of the amount of TNT that may be present. Further validation of the Acetone extraction method to determine TNT concentrations in coarse soil fractions (2 mm to 2-inch) is recommended if this method is to be used as an accurate quantitative method.

Total	**100.0%**		**100.0%**	

Notes:

[1)]: The "Quick Field Acetone Extraction and Analysis" as used during this study for analysis of coarse material is not an approved or validated method. The purpose of this extraction is to provide a practical method to obtain an indication of TNT levels in samples containing material up to 2" in size without the need for sample crushing. It was noted that the extraction time (1 to 24 hrs) had an influence on the total amount of TNT analyzed in the extract. Also, a higher extraction efficiency was achieved on crushed samples vs. uncrushed samples. The results of acetone analysis performed in this study should only considered to be "general indicative". Further optimization and validation of the acetone extraction method for use on coarse samples would be required if this method or an adaptation of this method would be proposed for use during the actual remediation.

Notes:

[1)]: The "Quick Field Acetone Extraction and Analysis" as used during this study for analysis of coarse material is not an approved or validated method. The purpose of this extraction is to provide a practical method to obtain an indication of TNT levels in samples containing material up to 2" in size without the need for sample crushing. It was noted that the extraction time (1 to 24 hrs) had an influence on the total amount of TNT analyzed in the extract. Also, a higher extraction efficiency was achieved on crushed samples vs. uncrushed samples. The results of acetone analysis performed in this study should only considered to be "general indicative". Further optimization and validation of the acetone extraction method for use on coarse samples would be required if this method or an adaptation of this method would be proposed for use during the actual remediation.

"Technology for a clean environment"

Scott M. Larew
Principal Scientist
Kennedy/Jenks Consultants
214 Carnegie Center, Suite 103
Princeton, New Jersey 08540
Office: 609.285.2620; Direct: 609.285.2626; Mobile: 609.661.3920

Project: Former Kenvil Works Facility - Kenvil, New Jersey
Kennedy/Jenks Consultants Project Number: 1540001*27

ART Kenvil Scope of Work for on-site study in October 2017:

Task1
- Confirmation of overall general particle size distribution (oversize, sand, fines) for two types of **representative** plant feed:
  - Collection of representative samples of "up-hill" material by KJ prior to ART arrival
    - 3 composites, of one cubic yard each, prescreen at minus 2 inch on tarps ready for ART on arrival
  - Collection of representative samples of "down-hill" material by KJ prior to ART arrival
    - 3 composites, of one cubic yard each, prescreen at minus 2 inch on tarps ready for ART on arrival
  - Compare oversize, sand and fines for each feed type and determine impact to processing.
  - ART will decide how to use the composites for testing

Task2A+2B
- Determine design parameters for drum scrubber
  - Drop distance (drum diameter)
  - Number of drops (drum length)
  - Verify optimum primary wet screen size as 4 mm

Task 3
- Verification of effectiveness attrition scrubber and post attrition on soil size fraction - 4mm
  - Prepare and perform particle size on minus 4 mm soil feed, perform attritioning, perform particle size on post minus 4 mm attritioned material. Determine TNT concentration as function of particle size before and after attritioning

Task4
- Re-verify selected polymer for strength for both feed types

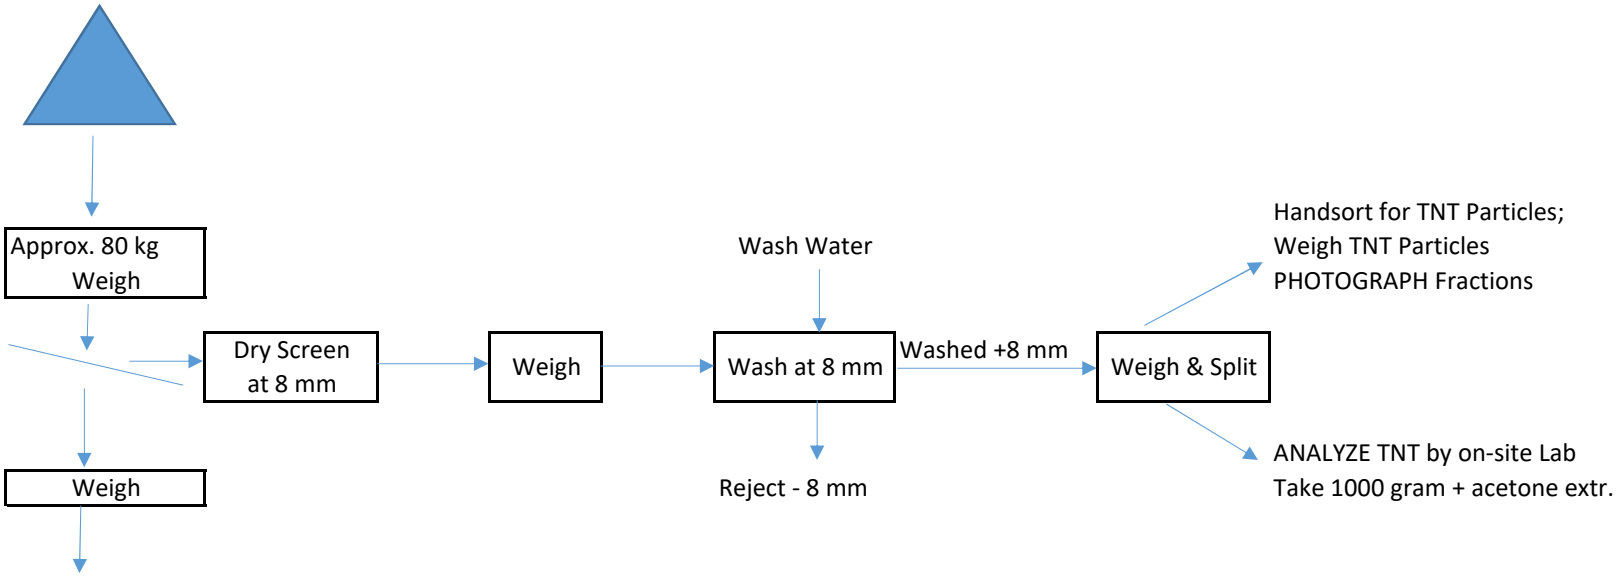
Task5
- Perform a "process simulation" on one type of feed
  - Wet screen at 4 mm
  - Drum scrubber simulation
    - Evaluate material prior to drum scrubbing
    - Screen post scrubber at 4 mm to create coarse oversize and evaluate

ART Engineering LLC

Task 1: Initial Composite Pile Analysis (2 Composites)

Oct 5 2017

Composite Soil Pile



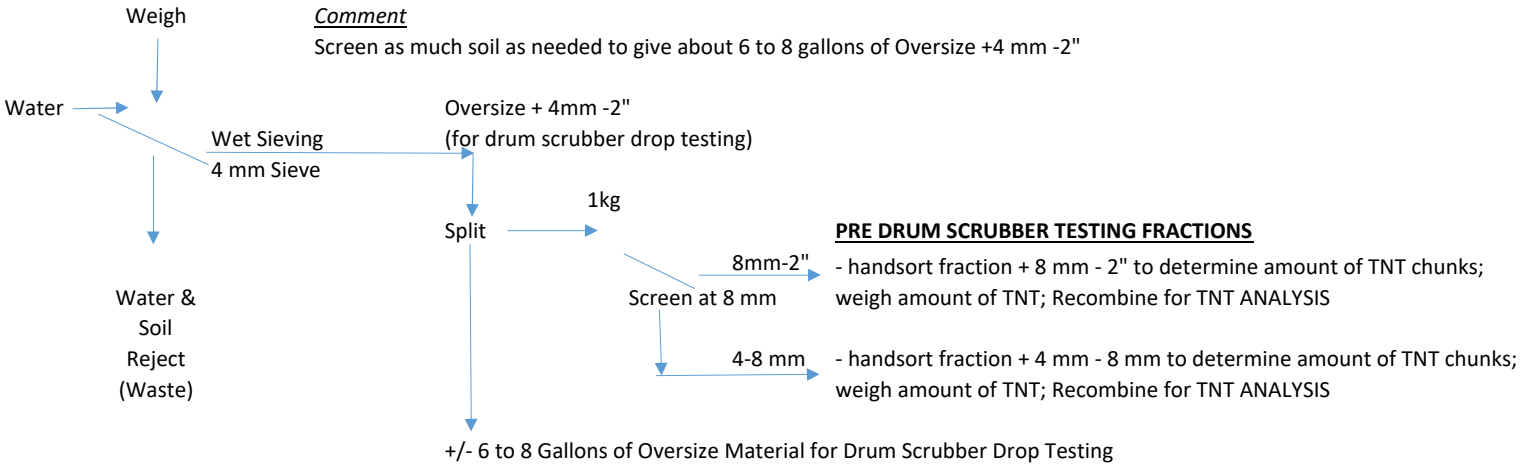
BASE SAMPLE - 8 mm
(2 x 5-gallon bucket)

- Determine Moisture Content (100 gram)
- TNT analysis BASE SAMPLE - extract 1000 gram with Acetone & ANALYZE TNT by on-site Lab (IN DUPLICATE)
- Particle Size Analysis (300 gr), 4 mm, 2 mm, 1 mm, 0.5 mm, 0.25 mm, 0.125 mm, 0.105 mm, 0.063 mm , dry & weigh & archive fractions
- Wet Screening (1000 gr) to generate four size fractions for TNT ANALYTICAL - PRE-PROCESSING:
  - Fraction 4 mm - 8 mm
  - Fraction 2 - 4 mm
  - Fraction 0.105 - 2 mm
  - Fraction < 0.105 mm

Task 2A: Preparation of Oversize Sample for Drum Scrubber Testing

ART Engineering LLC
Oct 5 2017

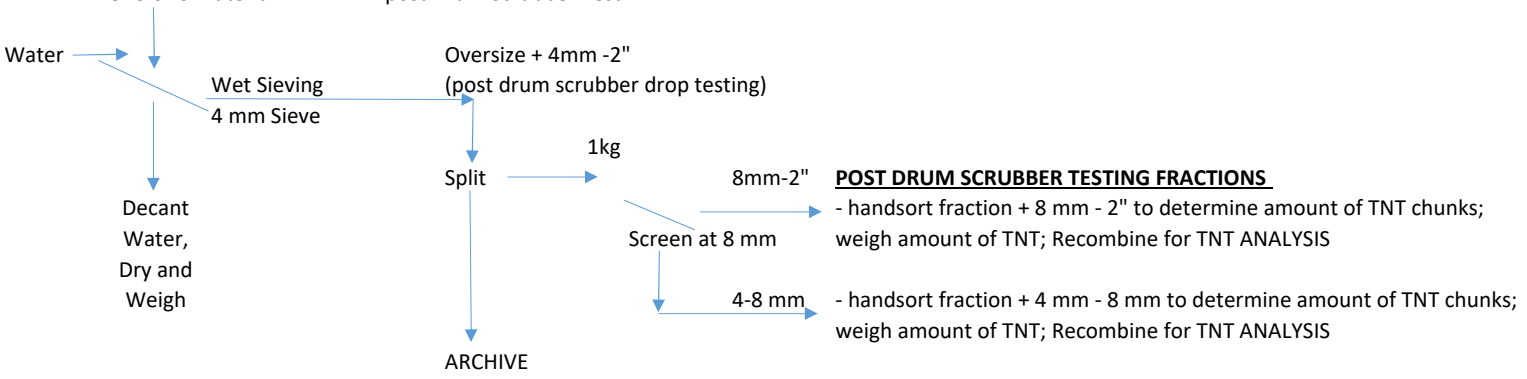
CHOOSEN COMPOSITE with most TNT "chunks" based on outcome of Task 1



Task 2B: Drum Scrubber Testing

- Drop Oversize Material created from Task 2A into Wheelbarel repeatedly (15 times)

Oversize Material +4 mm -2" post Drum Scrubber Test



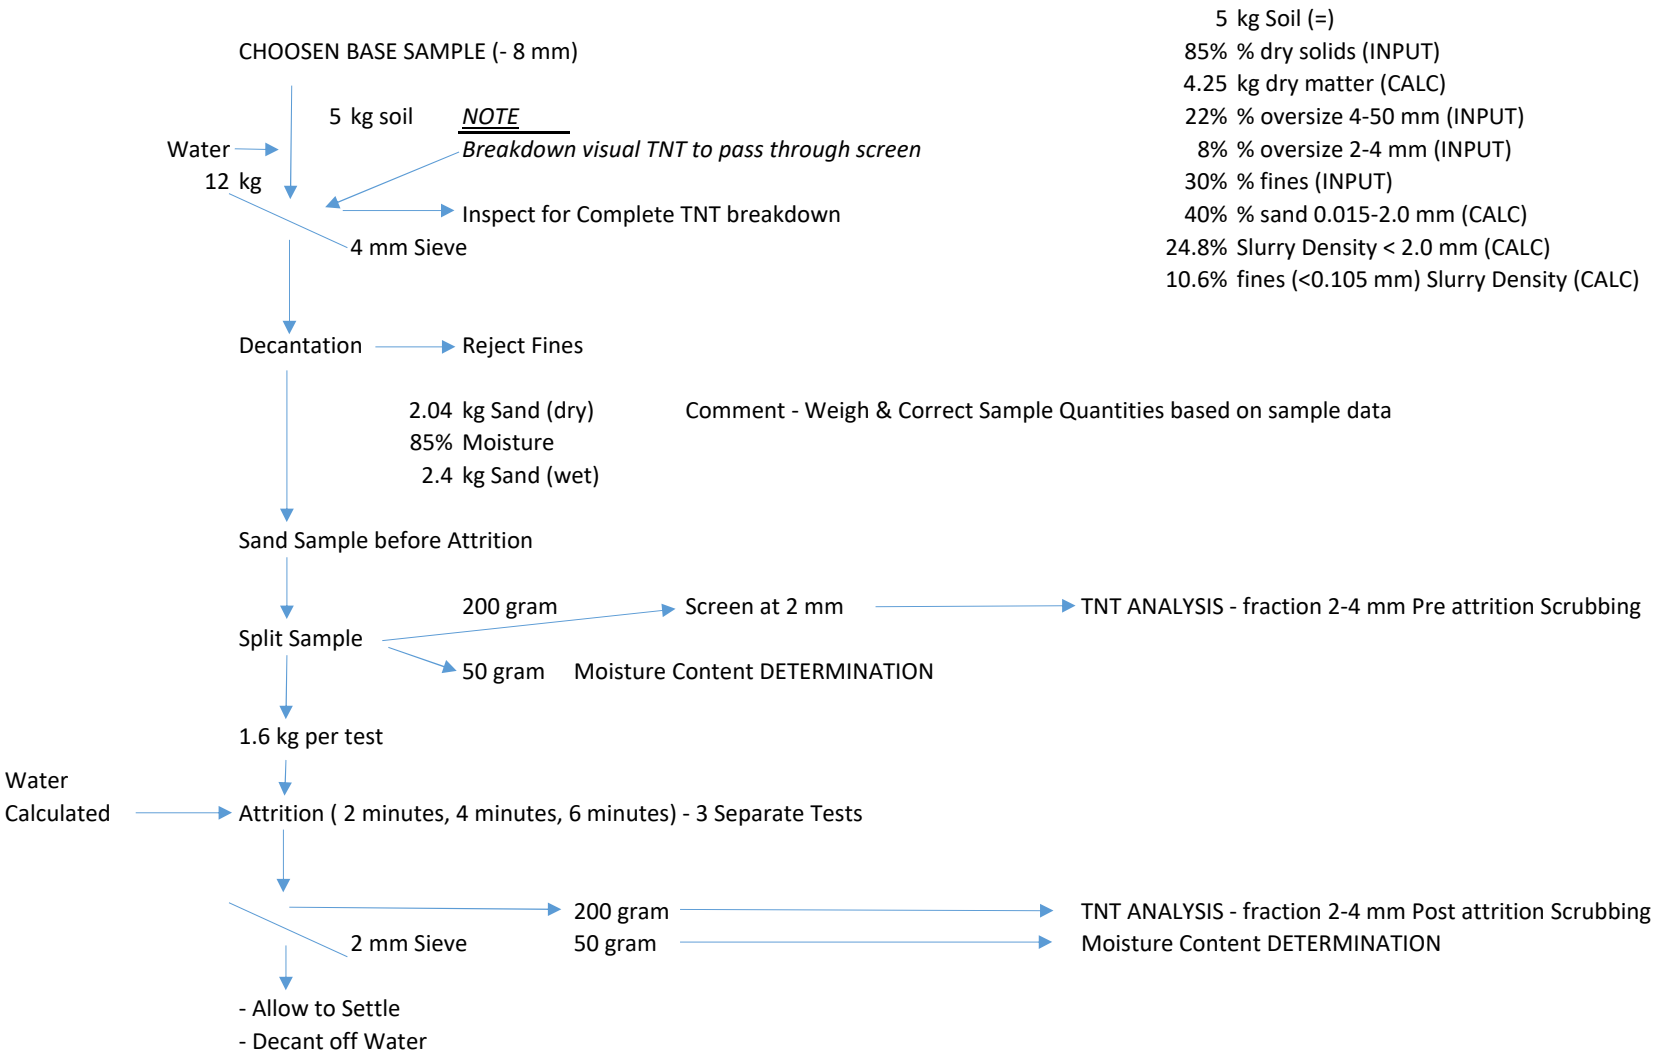
- if Drum Scrubber test is considered succesfull, perform acetone extraction & TNT analysis by on-site lab

- Repeat Drum Scrubber Test as needed.

Task 3: Attrition Scrubbing Tests - Three Tests: 2 min, 4 min, 6 min

ART Engineering LLC

Oct 5 2017



5 kg Soil (=)
85% % dry solids (INPUT)
4.25 kg dry matter (CALC)
22% % oversize 4-50 mm (INPUT)
8% % oversize 2-4 mm (INPUT)
30% % fines (INPUT)
40% % sand 0.015-2.0 mm (CALC)
24.8% Slurry Density < 2.0 mm (CALC)
10.6% fines (<0.105 mm) Slurry Density (CALC)

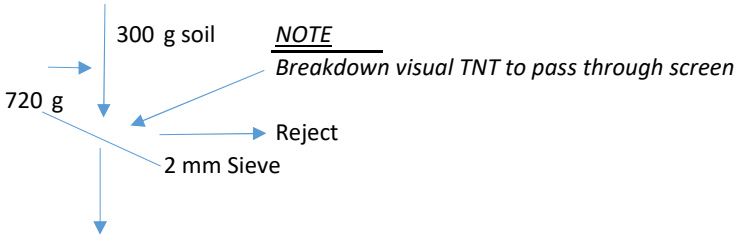
* FOR BEST SELECTED ATTRITON SCRUBBING TEST - ANALYZE SAND AND FINES FRACTIONS

- Wet Screening (300 gr) to evaluate SAND and FINES fractions for TNT Analysis:
  - TNT ANALYSIS - Sand Fraction 0.105 - 2 mm
  - TNT ANALYSIS - Fines Fraction < 0.105 mm

Task 4A: Polymer Strength Jar Testing

ART Engineering LLC
Oct 5 2017

CHOOSEN COMPOSITE BASE SAMPLE

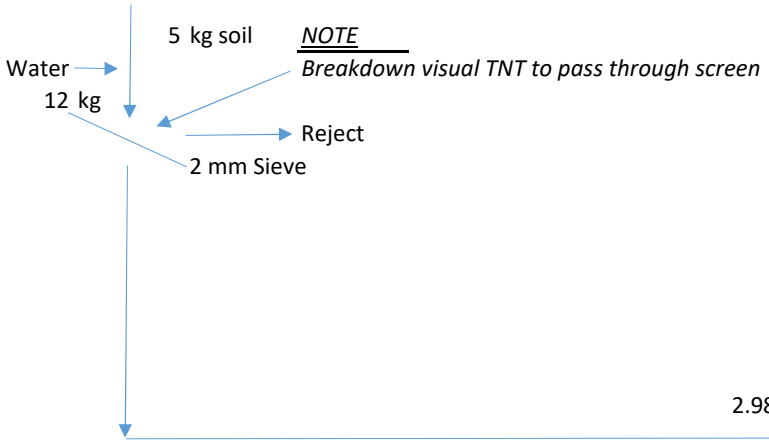


Daramend Dosage	3.6	gram
Polymer Dosage	59.4	gram Polymer Solution @0.3%
Polymer Dosage:	2	lbs/FEED ton
Start Polymer Dosage:	1.00	gr/kg
Make up Strength Polymer Solut	0.30%	

Soil Slurry Jar Tests - Fits 1 Quart Jars
- Multiple Tests- Variables: Polymer Dosage, Floc Strenth Screening

Task 4B: Polymer Strength Verification

CHOOSEN COMPOSITE BASE SAMPLE



5	kg Soil (=)	
85%	% dry solids (INPUT)	
4.25	kg dry matter (CALC)	
22%	% oversize 4-50 mm (INPUT)	
8%	% oversize 2-4 mm (INPUT)	
30%	% fines (INPUT)	
40%	% sand 0.015-2.0 mm (CALC)	
24.8%	Slurry Density < 2.0 mm (CALC)	
10.6%	fines (<0.105 mm) Slurry Density (CALC)	

DARAMEND 2% by weight on dry weight basis for "sand and fines less than 2 mm"

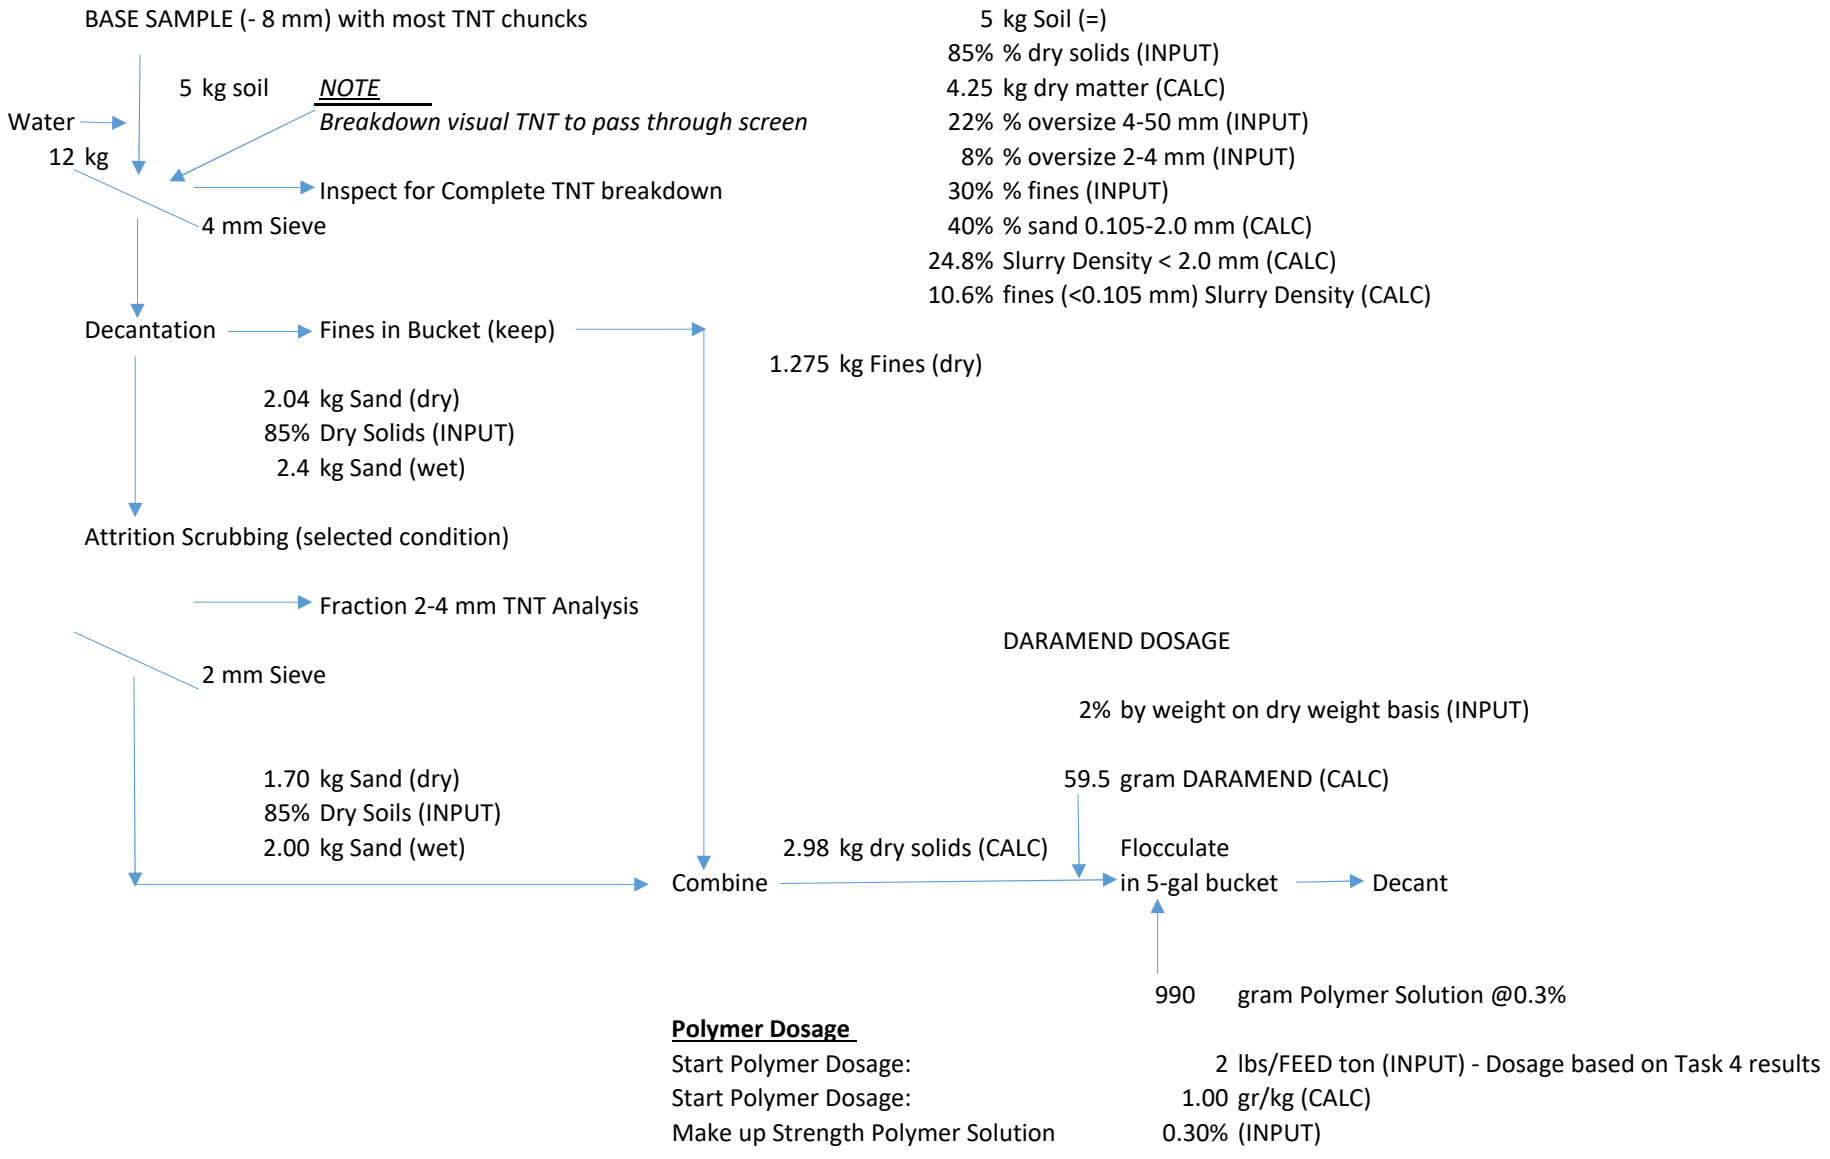
59.5 gram DARAMEND (CALC)

2.98 kg dry solids (CALC) → Flocculate in 5-gal bucket → Poor in 2nd Bucket & Evaluate Strength

Polymer Dosage	990	gram Polymer Solution @0.3%
Polymer Dosage:	2	lbs/FEED ton (BASED ON TASK 4A) (INPUT)
Start Polymer Dosage:	1.00	gr/kg
Make up Strength Polymer Solution	0.30%	

Task 5: Process Simulation

ART Engineering LLC
Oct 5 2017



Polymer Dosage

Start Polymer Dosage:	2	lbs/FEED ton (INPUT) - Dosage based on Task 4 results
Start Polymer Dosage:	1.00	gr/kg (CALC)
Make up Strength Polymer Solution	0.30%	(INPUT)

1 = Data reported from a dilution
2 = Diluted out.
3 = The concentration indicated is above the instrument calibration range. This value is an estimated concentration.
4 = Results may be biased high because of high continuing calibration verification (CCV).
5 = Resuts may be biased low because of low continuing calibration verification (CCV).
6 = The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory control limits.
7 = Precision for the matrix spike duplicate, laboratory control sample duplicate or lab duplicate was outside of control limits.

Selected Polymer FBS C1082 - MSDS

Fort Bend Services, Inc.
Water & Waste Treatment Specialists

SAFETY DATA SHEET
FBS C1082

I. PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: FBS C1082
CHEMICAL NAME: Cationic water-soluble polymer in emulsion
PRODUCT USE: Flocculation/Dewatering agent
SUPPLIER: Fort Bend Services Inc. Tel: 281-261-5199
13303 Redfish Lane Tel: 800-933-3678
Stafford, TX 77477 USA
EMERGENCY TELEPHONE:
CHEMTREC: 1-800-424-9300
IDENTIFICATION NO:

II. HAZARDS IDENTIFICATION

State of Matter: Viscous liquid, milky in color with aliphatic odor

Emergency overview
Caution – Slippery when wet!
May cause eye and skin irritation.
Eye wash fountains and safety showers must be readily accessible.

Potential health effects
Primary routes of exposure:
Routes of entry for solids and liquids include eye and skin contact, ingestion and inhalation. Routes of entry for gases include inhalation and eye contact. Skin contact may be a route of entry for liquefied gases.
Chronic toxicity:
Carcinogenicity:
None of the components in this product are listed by IARC, NTP, OSHA or ACGIH as a carcinogen.
Reproductive toxicity:
Not toxic for reproductivity
Mutagenicity:
Not mutagenic

III. COMPOSITION/INFORMATION ON INGREDIENTS

CAS Number	Content (W/W)	Chemical Name
64742-47-8	20 – 30%	Distillates, petroleum hydrotreated light
69011-36-5	< 3.0%	Poly(oxy-1,2-ethanediyl), a-4-tridecyl-w-hydroxy-, branched

IV. FIRST AID MEASURES

INHALATION:
Remove to fresh air. No hazards which require special first aid measures.
INGESTION:
Rinse mouth with water. Do NOT induce vomiting. Get medical attention immediately.
SKIN CONTACT:
Wash affected areas thoroughly with soap and water. Seek medical attention if irritation persists.
EYE CONTACT:
Immediately wash affected eyes for at least 15 minutes under running water with eyelids held open. Seek medical attention immediately.

V. FIRE-FIGHTING MEASURES

Flash point does not flash
Auto-ignition temperature does not ignite

SUITABLE EXTINGUISHING MEDIA:
Dry powder, foam, carbon dioxide, water, water spray
ADDITIONAL INFORMATION:
Avoid use of water jet. If water is used, restrict pedestrian and vehicular traffic in areas where slip hazard may exist. Contaminated extinguishing water must be disposed of in accordance with official regulations.
HAZARDS DURING FIRE-FIGHTING:
Spilled product is slippery underfoot. Extremely slippery when wet.
Thermal decomposition may produce: hydrogen chloride gas, nitrogen oxides, carbon oxides, ammonia

Hydrogen cyanide may be produced in the event of combustion in an oxygen deficient atmosphere.

PROTECTIVE EQUIPMENT FOR FIRE-FIGHTING:
Wear self-contained breathing apparatus and protective suit.

VI. ACCIDENTAL RELEASE MEASURES

PERSONAL PRECAUTIONS:
Use personal protective equipment.

ENVIRONMENTAL PRECAUTIONS:
Do not discharge into drains/surface waters/groundwater.

SPILL CLEAN UP METHODS:
Do not flush with water. Dike spill. Large spills clean up promptly by scoop or vacuum. Soak up residual material with an inert absorbent material. Keep in suitable, closed and labeled container(s) for disposal in accordance with local, state and federal regulations.

VII. HANDLING AND STORAGE

HANDLING:
Avoid contact with skin and eyes. Ensure there is adequate local/mechanical exhaust. Do not smoke.
Handle in accordance with good industrial hygiene and safety practices.

STORAGE:
Keep container tightly closed and dry; store in a cool and dry place (0 - 30°C). Avoid wet, damp or humid conditions, temperature extremes and ignition sources. Freezing will affect the physical condition and may damage the product.

VIII. EXPOSURE CONTROLS/PERSONAL PROTECTION

COMPONENTS WITH OCCUPATIONAL EXPOSURE LIMITS:

Distillates (petroleum), hydrotreated light	ACGIH	TWA value 200 mg/m^3 Non-aerosol(total hydrocarbon vapor); Application restricted to conditions in which there are negligible aerosol exposures. Skin Designation Non-aerosol (total hydrocarbon vapor); The substance can be absorbed through the skin.

ENGINEERING CONTROLS: Ensure adequate ventilation. Use local exhaust if misting occurs. Natural ventilation is adequate in the absence of mists.

PROTECTIVE EQUIPMENT:

RESPIRATORY EQUIPMENT:	Not required except in case of aerosol formation or inadequate ventilation.
HAND PROTECTION:	PVC or other plastic material gloves
EYE PROTECTION:	Safety glasses with side-shields; do not wear contact lenses where product is used.
SKIN PROTECION:	Protective clothing
HYGIENE MEASURES:	Handle in accordance with good industrial hygiene and safety practice

IX. PHYSICAL AND CHEMICAL PROPERTIES

FORM:	Viscous liquid
ODOR:	Aliphatic
COLOR:	Milky white
pH:	4 - 6 (5 g/l)
SPECIFIC GRAVITY:	1.05
MELT/FREEZE POINT:	< 5° C
AUTOIGNITION TEMPERATURE:	Does not ignite
FLASH POINT:	Does not flash
VAPOR PRESSURE (mm Hg):	2.3 kPa @ 20°C
BULK VISCOSITY:	1200 (cps)
VISCOSITY:	>20.5 @ 40°c (mm^2/s)

X. STABILITY AND REACTIVITY

CONDITIONS TO AVOID:
Avoid extreme temperatures.

SUBSTANCES TO AVOID:
Oxidizing agents may cause exothermic reactions.

HAZARDOUS REACTIONS:
Stable under normal conditions. Hazardous polymerization does not occur.

HAZARDOUS DECOMPOSITION PRODUCTS:
Thermal decomposition may produce: hydrogen chloride gas, nitrogen oxides, carbon oxides, ammonia
Hydrogen cyanide may be produced in the event of combustion in an oxygen deficient atmosphere.

XI. TOXICOLOGICAL INFORMATION

ACUTE TOXICITY

ORAL:

Type of value:	LD50
Species:	rat
Value:	>5,000 mg/kg

SKIN:

Type of value:	LD50
Species:	rat
Value:	>5,000 mg/kg

INHALATION: This product is not expected to be toxic by inhalation.

IRRITATION/CORROSION

SKIN:	Slightly irritating
EYE:	May cause eye irritation with susceptible persons
SENSITIZATION:	Not sensitizing
CHRONIC TOXICITY:	No chronic effects.

Relevant information on the hazardous components:

Distillates, petroleum hydrotreated light

Acute oral toxicity:	LD50/oral/rat	> 5000 mg/kg OECD 401
Acute dermal toxicity:	LD50/dermal/rabbit	> 5000 mg/kg OECD 402
Acute inhalation toxicity:	LC50/inhalation/4 hr/rat	4951 mg/m^3 OECD 403
Skin corrosion/irritation:	Not irritating OECD 404	
Eye corrosion/irritation:	Not irritating OECD 405	
Sensitization:	Not expected to be sensitizing	

Poly(oxy-1,2-ethanediyl), a-tridecyl-w-hydroxy-, branched

Acute oral toxicity:	LD50/oral/rat	200 - 300 mg/kg
Acute dermal toxicity:	LD50/dermal/rabbit	> 2000 mg/kg
Acute inhalation toxicity:	No data available	
Skin corrosion/irritation:	Non-irritating	
Eye corrosion/irritation:	Causes severe irritation	
Sensitization:	Did not cause allergic skin reactions when tested in guinea pigs	

XII. ECOLOGICAL INFORMATION

Fish

Acute:

LC50 (96):	10 - 100 mg/L OECD 203

Aquatic invertebrates

Acute:

Daphnia /EC50 (48 h):	10 - 100 mg/L OECD 202

Algae: Algal inhibition tests are not appropriate. The flocculation characteristics of the product interfere directly in the test medium preventing homogenous distribution which invalidates the test.

Environmental Fate

Hydrolysis: At natural pHs (>6) the polymer degrades due to hydrolysis to more than 70% in 28 days. The hydrolysis products are not harmful to aquatic organisms.

Degradation: Readily biodegradable

Bioaccumulation: Not expected to bioaccumulate

Relevant information on the hazardous components:

Distillates, petroleum, hydrotreated light

Acute toxicity to fish:	LC50/Oncorhynchus mykiss/96 hr	>1000 mg/L
Acute toxicity to invertebrates:	EC50/Daphnia magna/48 hr	>1000 mg/L
Acute toxicity to algae:	ICO/Pseudokirchneriella subcapitata/72 hr	>1000 mg/L
Chronic toxicity to fish:	NOEC/Oncorhynchus mykiss/28 day	>1000 mg/L
Chronic toxicity to invertebrates:	NOEC/Daphnia magna/21 day	>1000 mg/L
Toxicity to microorganisms:	EC50/Tetrahymena pyriformis/48 hr	>1000 mg/L

Poly(oxy-1,2-ethanediyl), a-tridecyl-w-hydroxy-, branched

Acute toxicity to fish:	LC50/Cyprinus carpio/96 hr	1 - 10 mg/L
Acute toxicity to invertebrates:	EC50/Daphnia/48 hr	1 - 10 mg/L
Acute toxicity to algae:	IC50/Desmodesmus subspicatus/72 hr	1 - 10 mg/L
Chronic toxicity to fish:	No data available	
Chronic toxicity to invertebrates:	No data available	
Toxicity to microorganisms:	EC10/activated sludge/17 hr	>1000 mg/L

XIII. DISPOSAL CONSIDERATIONS

WASTE MANAGEMENT:

Dispose of in accordance with national, state and local regulations.

CONTAINER DISPOSAL:

Dispose of in a licensed facility. Recommend crushing, puncturing or other means to prevent unauthorized use of used containers.

RCRA:

Not a hazardous waste under RCRA (40 CFR 261)

XIV. TRANSPORT INFORMATION

LAND TRANSPORT:

US DOT — Not classified as a dangerous good under transport regulations

SEA TRANSPORT:

IMDG — Not classified as a dangerous good under transport regulations

AIR TRANSPORT:

IATA/ICAO — Not classified as a dangerous good under transport regulations

XV. REGULATORY INFORMATION

SARA: No reporting requirements

EPCRA 311/312: Not hazardous

CALIFORNIA PROP. 65: The product contains the following substance(s) known to the State of California to cause cancer: Acrylamide

USA (TSCA): All components are listed or exempt from listing

CANADA (DSL): All components are listed or exempt from listing

STATE REGULATIONS

State RTK	CAS Number	Chemical Name
MA, NJ, PA	64742-47-8	Distillates, petroleum, hydrotreated light

PROCEDURE STEPS FOR ACETONE EXTRACTION AND EXPRAY ANALYSIS OF OVERSIZE

KENVIL SITE - SUMMARY REPORT OF TESTING OF OVERSIZE EXTRACTION PROCEDURES FOR SEMI-QUANTITATIVE EXPRAY ANALYSIS

Prepared for:

Kennedy Jenks & Ashland Incorporated

ART Engineering LLC (ART) has completed the testing of soil and oversize extraction procedures to perform a fast turnaround semi-quantitative field EXPRAY analysis of TNT levels on soil and oversize samples.

Photos of the various testing steps are attached. Minor updates to the soil and oversize extraction procedures were made based on laboratory observations. An updated procedure is attached.

Conclusions

- The procedures as originally outlined in *"GENERAL OUTLINE OF PROCEDURE STEPS FOR EXPRAY ANALYSIS OF OVERSIZE, ART Engineering LLC, September 5, 2017***"** were found to work well.

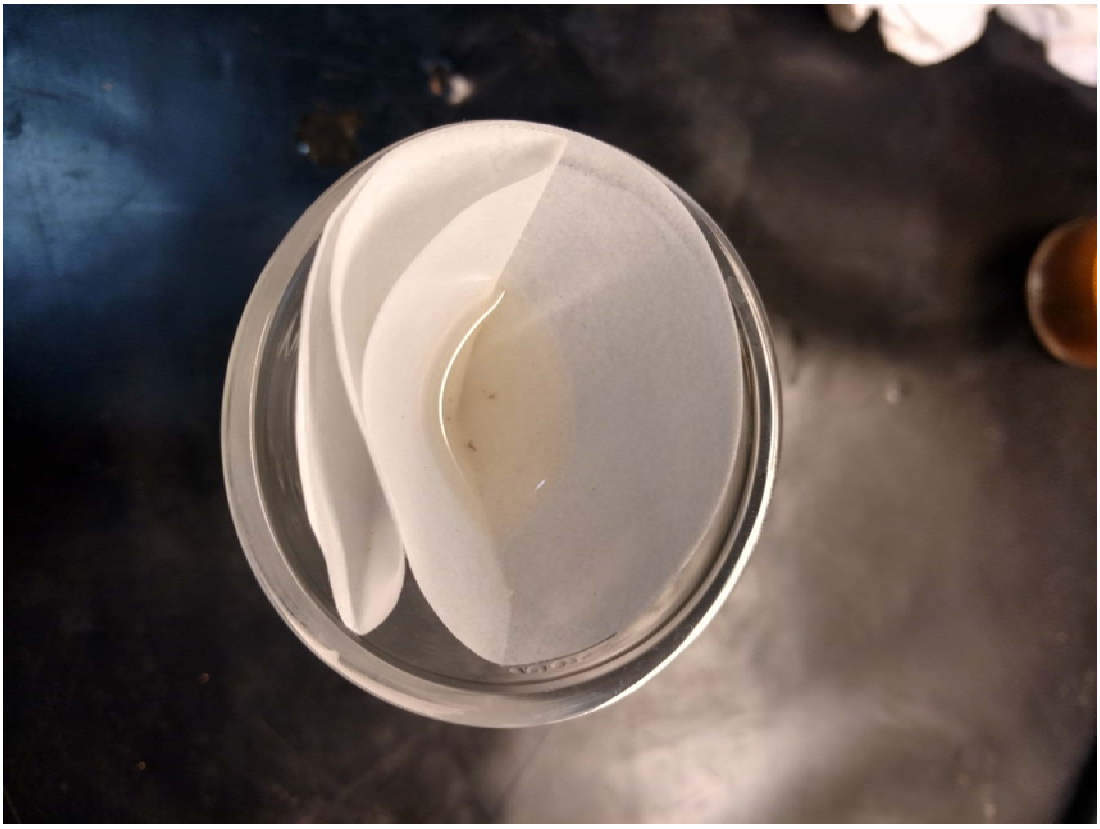
- The acetone extract was clear after 5 minutes settling time. The moisture content did not have any negative impact on the filterability of the extract. The extract was free of solids after filtration through 11 micron paper filter.

- ART recommends use of the updated extraction procedure (attached) for use during the upcoming field work.

Wet Soil Used for Extraction (30 gram)

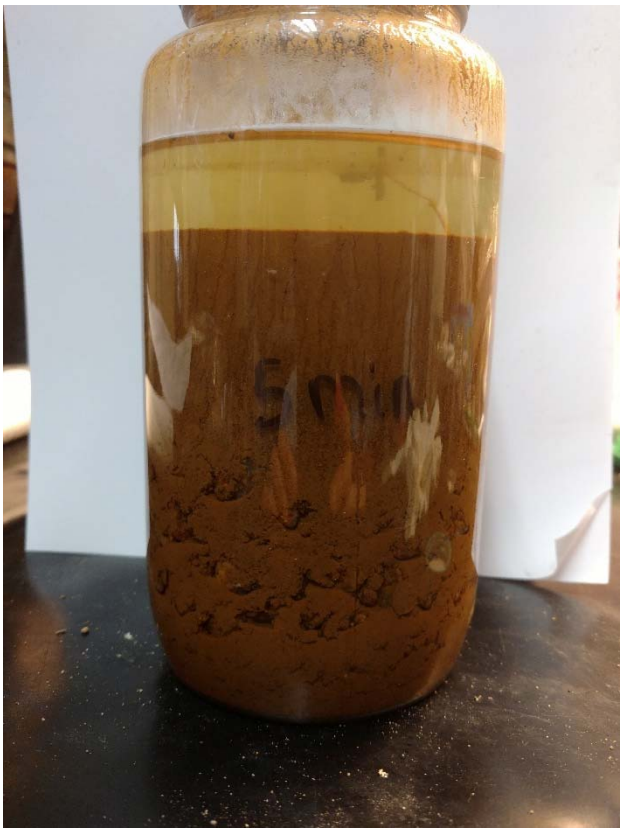
Extracted Soil (30 gram soil with 30 gram acetone) after 5 minutes settling

Wet Soil Extraction – Acetone Extract after Filtration

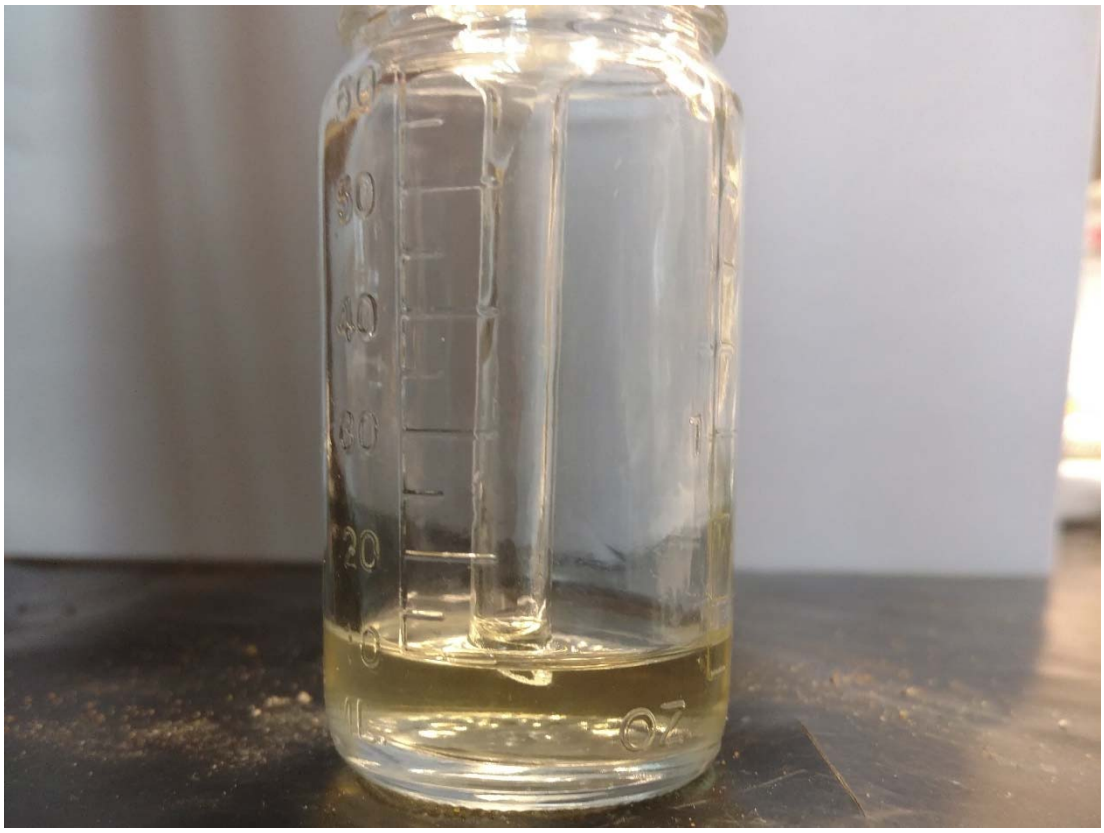


Wet Soil Extraction – Filter Top View

Oversize +4.75 mm with Moisture (1000 gram)



Wet Oversize Extraction 1000 gram Oversize + 250 gram Acetone after 5 minutes Settling



Wet Oversize Extraction – Acetone Extract after Filtration

Wet Oversize Extraction – Filter Top View

ART Engineering LLC
Sept 20 2017

OUTLINE OF PROCEDURE STEPS FOR EXPRAY ANALYSIS OF OVERSIZE

Updated 9/20/2017

Step 1: Extraction of Oversize

- Add approximately 1000 gram of Oversize into 1 Quart Glass Jar
- Note Net Weight (A) in Gram
- Add 250 Gram Acetone (Note Net Weight in Gram)
- Put lid on Glass Jar and intermittently shake for 10 minutes
- Allow solids to settle for 15 min.

Step 2: Prepare sample for EXPRAY analysis

- Open Jar and take approximately 10 ml liquid sample from the top of the jar with a glass pipet; empty pipet slowly through Whatman filter paper (11 micron) folded to fit glass funnel. Collect two drops of filtrate onto a 5.5 cm diameter Whatman filter
- Allow sample on Whatman filter to dry for 5 minutes; this will be the sample for EXPRAY analysis

Step 3: Analysis

- After Whatman filter sample is dry, spray sample with EXPRAY; compare the color to color standards (0 ppm, 25 ppm, 50 ppm, 100 ppm, 200 ppm, 400 ppm, 800 ppm, 1600 ppm) prepared fresh on same day.
- Compare to sample color to standards; multiply result by a factor of 4 to correct for ratio of 1 part soil to 0.25 parts of acetone

Notes:

1) Note same procedure can be used for analysis of soils; use 30 grams of soil and 30 grams of acetone; extract in 2 oz glass jar.
2) Prepare standards based on extraction of actual soils (sand fraction) with known concentration of TNT

Supplies (Updated):

- 8 x 1 Quart of Acetone (Home depot – return not used acetone)
- 2 Cans of EXPRAY
- Set of 1 Quart Glass Jars with Teflon coated lid
- Set of 2 Oz Glass Jars with Teflon coated lid
- Set of 100 Whatman filters 100 mm diameter (11 micron openings)
- Set of 100 Whatman filters 55 mm diameter (2 micron openings)
- Couple of Glass funnels
- Set of 10 ml pipette with bulp
- Set of 200 Whatman filters 45 mm for EXPRAY analysis
- Set of Glass Droppers

Trenton, NJ 08625

Subject: Alliant Tech Systems (PI#000741) – Technical Consultation Summary

Dear Mr. Schick:

Thank you for taking the time to meet with us to discuss the Alliant Tech Systems (a.k.a. Hercules Kenvil Works) facility in Kenvil, New Jersey. On December 5, 2018, representatives of the New Jersey Department of Environmental Protection (NJDEP) and Hercules LLC (Hercules) met to discuss the proposed remediation of 2,4,6-trinitrotoluene (TNT) at Hercules Kenvil Works Facility located in Kenvil, Morris County, New Jersey (Program Interest No. 000741) (the Facility). Attending the meeting were:

- Kevin Schick – NJDEP
- Swati Toppin – NJDEP
- Paul Sanders – NJDEP
- Ed Meeks – Hercules
- Mark Foley – WSP (Licensed Site Remediation Professional)
- John Lucey – O'Brien & Gere
- Scott Larew – Kennedy/Jenks Consultants

The Technical Consultation Attendance Sheet is included as Attachment 1.

The meeting objective was to build consensus on the technical scope, regulatory approach, and site-specific cleanup goals associated with the proposed TNT Area remedy. Hercules provided an overview of the proposed remedy for TNT in soil and groundwater that included a summary of academic research, treatability studies, and field pilot studies that yielded Facility-specific data relative to the biodegradation of TNT and its metabolites. This data provided the technical basis for the proposed remedies.

The proposed remedy includes:

- Ex-situ soil preparation (grain size reduction) and bioremediation to reduce TNT source mass and achieve TNT concentrations between the NJDEP's Residential and Non-Residential Direct Contact Soil Remediation Standard (21 to 95 milligrams per kilogram [mg/kg]) after a single treatment season.
- Bioremediation amendment will be mixed with the soil at the base of the excavation (in accordance with NJPDES permit conditions); then excavations will be backfilled with bioremediated material.

Fax: +1 609 512-3600
wsp.com

- Pilot study data indicates that TNT continues to biodegrade in-situ following backfilling. TNT concentration reductions to at or below 1 mg/kg and less are anticipated.
- Long-term monitoring of TNT and its metabolites in soil to demonstrate bioremediation effectiveness
- Long-term monitoring of TNT and its metabolites in groundwater to demonstrate decreasing trends in concentration and plume extent

Hercules requested NJDEP's guidance on the establishment of a site-specific impact to groundwater soil remediation standard (SSIGWSRS) to guide remedial planning and remedial action work plan preparation. The discussion of the SSIGWSRS addressed two factors, the means of developing the value, and the utility of the value in the regulatory and remedial processes.

Method of SSIGWSRS Development

Hercules discussed the results of efforts to develop a SSIGWSRS for TNT using the standard NJDEP tools (i.e., synthetic precipitate leachate procedure (SPLP) spreadsheets, and SESOIL/AT123D modeling) and associated NJDEP guidance documents. NJDEP acknowledged the inherent variability associated with characterizing a solid (crystalline TNT) in a solid matrix (soil), and the influences of that variability on the SPLP method for developing a SSIGWSRS. Hercules indicated that they were unable to establish a predictable relationship between TNT concentrations in soil and associated SPLP leachate, and outlined steps taken in coordination with the analytical laboratory to reduce variability during the preparation and analysis.

NJDEP spoke to the SESOIL/AT123D model framework and the types of constituents the model is intended to assess. Specifically, NJDEP indicated that the model was developed to address highly mobile constituents (i.e., volatile organic compounds [VOCs]) that rapidly flush from soil and migrate through the vadose zone to groundwater. When discussing the potential use of the model to estimate TNT migration over time, NJDEP indicated that while TNT is soluble, its physiochemical properties cause it to move through the vadose zone and into groundwater at a rate well below that of VOCs and the range of rates contemplated during development of the model. NJDEP and Hercules agreed that the SESOIL/AT123D model is not the appropriate tool for developing a SSIGSWSRS for TNT.

Role of SSIGWSRS in Remedial Process

NJDEP understood Hercules' proactive effort to address the impact to groundwater pathway and remediation standard, and indicated that the involvement of their IGW technical staff may be premature given where the project is in the remedial process. NJDEP also noted the reduced reliance on a SSIGWSRS in instances where groundwater contamination already exists, such as this case. The parties agreed that the study results to date justify the proposed remedy, and are sufficient to support development of a remedial action work plan. Following active remediation of soil and monitoring of concentration trends in groundwater, Hercules will consult with NJDEP regarding development of a post-remediation site-specific impact to groundwater standard in the future.

As discussed, Hercules is working with Mark Romanell to resolve comments on the May 2016 Remedial Investigation Report – Groundwater, and move the CEA through the approval process. Hercules will provide milestone updates to the meeting attendees as the remedial action planning and implementation process proceeds.

Sincerely,

Mark Foley
Practice Leader

Ed, John, and Scott,

Please see note below from NJDEP regarding our technical consult meeting.

Ed, you will want to keep a record of this in your files along with the memo (attached).

Thanks
Mark

Subject: RE: PI #000741 - Hercules Kenvil (Alliant Tech Systems) - TNT Technical Consultation Summary Memorandum

Hello Mark,

The Hercules Kenvil (Alliant Tech. Systems) TNT Technical Consultation summary has been reviewed by the NJDEP attendees and has been found to be acceptable without any modification. The summary has been inserted into NJEMS for future reference.
Thank you.
